Agro-met Advisory Bulletin

(Period: 22nd to 26th July, 2016)

ग्रामीण कृषि मौसम सेवा

(Integrated Agro-Meteorological Advisory Services)

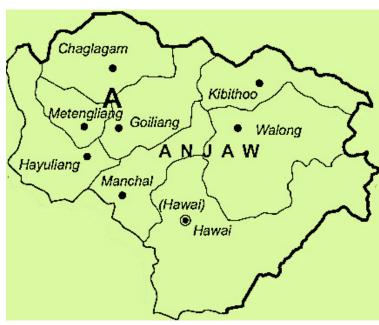

ICAR Research Complex for NEH Region Arunachal Pradesh Centre, Basar-791101

District: Anjaw

No: 59/2015-16/Fri

Hawai: Latitude: 28.2179994/ Longitude: 94.7277528/Altitude: 1296 m amsl

Weather summery of the previous week	Weather forecast valid up to 22 nd July, 2016
Rainfall = NA	Mostly cloudy sky with light/moderate rainfall. Max Temp=27°C and Min Temp=20°C, RH=66-99%, Wind Speed=2-4 kmph, Wind direction: ESE
Warning:	Heavy to very heavy rainfall is very likely in few places on 23 rd and 24 th July

Weather Based Agro-meteorological Advisories Bulletin

- Spraying operation should be done only on dry/clear weather
- Go for low cost polyhouses for year round cultivation of vegetables
- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- ICAR Basar recommend poultry variety VANARAJA for backyard rearing
- Warning: Spraying of DDT in crops is lethal

Сгор	Stage	Pest/Disease	Precautionary Practices to be followed
			FIELD CROPS
Wetland Rice	Nursery/ Transplantatio n	Stem borer / thrips	 Proper drainage to avoid excess water in case of heavy rainfall. Before transplanting, follow seedling root-dip treatment in chlorpyriphos 20 EC@ 2ml/10 lit for 12 hrs. Before transplanting, clip off the tip of seedlings to prevent
Jhum Rice/upland rice	Tillering stage		 infestation. On clear day, spray Triazophos 40 EC@4ml/lit water with sticker (@1ml/lit) In upland rice, spraying of 1% DAP is recommended to increase the nos. of effective tillers and yields. Carry out top dressing in upland rice of 2/3rd of recommended dose of urea. Maintain periphery of nursery field weed free and clean to prevent disease and pest harboring in weeds.
Soybean	Vegetative		Go for nipping in soyabean with excessive vegetative growth sown in the month of April-May
Pulses/Ground nut	Vegetative stage	Epicauta Bettle	 Spray azadirachtin 0.15 EC@ 1 ml/lit against Epicauta settle in soybean Proper drainage to avoid excess moisture or water logging.
			VEGETABLES
Ginger/turmeric	Vegetative stage	Soft Rot	• For management of soft rot in ginger: Need based drencing of Metalaxyl-8% + Mancozeb 64% WP @ 2.5 g per lit of water.
			ICULTURAL CROPS
Citrus	Fruiting	Fruit drop	Spray carbendazim @ 1ml/lit of water
Orchards	Multiple stages		 Prepare half moon terraces in fruit crops (orange/banana/apple/peach) grown in steep slopes to prevent nutrient loss during heavy downpour. Follow proper drainage and earthing up practices in low land/plain areas to avoid water stagnation in fruit orchards
Large Cardamom	Flowering stage	Chirkey Disease	 Remove diseased part & keep inflorescence clean. Need based spray of broad spectrum fungicide like carbendazim @2g/lit water.
Banana	Bunching & planting		 Desuckering of banana to be done leaving one suckers per plant to maintain the health of mother plant. Remove the male flower in banana bunches to attain better finger/fruit size. Remove excess sucker from Banana in mother plant and
			 give support in banana bunches to protect falling due to heavy weight or storm. Sword suckers with stout base, tapering towards the top with narrow leaves should be selected for planting at 3m x 3m spacing.
		Α	GROFORESTRY
Toko Palm and other MPTs	Seedling		 Transplantation of seedling in filed followed by application of basal dose of fertilizers. Suitable time for transplanting of seedlings cuttings in the fields. High time of Insect attack, apply Bordeaux mixture or lime.
T 1	64	D'-	LIVESTOCKS
Livestock Pigs	Stage All stages	Disease	 Precautionary Practices to be followed Vaccination in DOC against RD(F1) at 4-6 days old followed by booster dose after month. Deworm at regular interval

			• Disinfecting the animal sheds with lime powder/ bleaching powder/ 4%NaOH at regular interval is advocated
Poultry	All stages	Ranikhet	• Vaccinate DOC chicks against RD/F1 on 4 th day after birth & booster dose after 1 months.
Fishery			• Broadcast mustard Oil Cake (MOC) @5kg/day over the pond
			twice daily to feed fish fingerlings
			• Keep the periphery of fish grow-out tank clean
Cattle/Mithun	All stages	FMD	Vaccination is advocated against FMD
			• Deworming with antihelmintic drugs like oxyclozanide or pyrantel.
Contact Scientists (ICAR) or State Agril Staff or KVK staff for measures against adverse conditions or call at 03795-226237/226247

Wetland Rice	Nursery/ Transplantatio n	Stem borer / thrips	 Before transplanting, follow seedling root-dip treatment in chlorpyriphos 20 EC@ 2ml/10 lit for 12 hrs. Before transplanting, clip off the tip of seedlings to prevent infestation. On clear day, spray Triazophos 40 EC@4ml/lit water with sticker (@1ml/lit)
Pulses/Ground nut	Vegetative stage	Cercospora Leaf spot & Epicauta bettle	 Spray azadirachtin 0.15 EC@ 1 ml/lit against Epicauta bettle in soybean Foliar spray of carbandazim/Mancozab@2gm/lit Manual weeding in greengram/blackgram Proper drainage to avoid excess moisture or water logging.
Upland rice	Tillering stage	Leaf Blast	 In upland rice, spraying of 1% DAP is recommended to increase the nos. of effective tillers and yields. Carry out top dressing in upland rice of 2/3rd of recommended dose of urea. Maintain periphery of nursery field weed free and clean to prevent disease and pest harboring in weeds. On clear/sunny days, spray carbendazim @2g/lit water in <i>the</i> field to control heavy infestation of leaf blast & leaf spot at 15 days interval.
			VEGETABES
Tomato	Fruiting		 Removing sideshoots is an important job which prevents the fruits being shaded by leaves. As temperatures rise, keep watering your plants, but avoid watering the leaves excessively that may lead to disease infestation.
Ginger/turmeric	Vegetative stage	Soft Rot	 Cultural practice like weeding/earthing up is recommended followed by basal dose of fertilizers For management of soft rot in ginger: Need based drencing of Metalaxyl-8% + Mancozeb 64% WP @ 2.5 g per lit of water.
			FRUIT CROPS
Large Cardamom	Flowering stage	Chirkey Disease	 Remove diseased part & keep inflorescence clean. Need based spray of broad spectrum fungicide like carbendazim @2g/lit water.
Orchards	Multiple stages		 Prepare half moon terraces in fruit crops (orange/banana/apple/peach) grown in steep slopes to prevent nutrient loss during heavy downpour. Follow proper drainage and earthing up practices in low land/plain areas to avoid water stagnation in fruit orchards
Banana	Bunching & planting		 Remove excess sucker from Banana in mother plant and give support in banana bunches to protect falling due to heavy weight or storm. Sword suckers with stout base, tapering towards the top with narrow leaves should be selected for planting at 3m x 3m spacing.
Pineapple	Active Vegetative stage		 Remove excess suckers and spray NAA@100ppm to increase fruit size and improve quality.
	5460	Δ	GROFORESTRY
Toko Palm and other MPTs	Seedling		 Transplantation of seedling in filed followed by application of basal dose of fertilizers. Suitable time for transplanting of seedlings cuttings in the fields. High time of Insect attack, apply Bordeaux mixture or lime.

LIVESTOCKS			
Livestock	Stage	Disease	Precautionary Practices to be followed
Pigs	All stages		Deworm at regular interval
			• During scarcity of fodder provide hay/silage/feedblocks.
			• Disinfecting the animal/bird sheds with lime powder/
			bleaching powder/ 4%NaOH at regular interval is
			advocated
Poultry	All stages		 Provide anti-coccidial drugs as preventive dose
			• Vaccinate DOC chicks against RD/F1 on 4 th day after birth
			& booster dose after 1 month
Fishery			• Right time for stocking of fish fingerlings in fish tank
			with stocking density $@1/m^2$
			• Broadcast mustard Oil Cake (MOC) @5kg/day over the
			pond twice daily to feed fish fingerlings
			• Keep the periphery of fish grow-out tank clean
Cattle/Mithun		FMD	Vaccination is advocated
			• Deworming with antihelmintic drugs like oxyclozanide or
			pyrantel

Carry out top dressing in upland rice of 2/3rd of recommended dose of urea. Maintain periphery of nursery field weed free and clean to the second dose of urea.
Soybean	Vegetative		 prevent disease and pest harboring in weeds. Go for nipping in soyabean with excessive vegetative growth sown in the month of April-May
Wetland Rice	Nursery/ Transplantatio n	Stem borer / thrips	 Before transplanting, follow seedling root-dip treatment in chlorpyriphos 20 EC@ 2ml/10 lit for 12 hrs. Before transplanting, clip off the tip of seedlings to preven infestation. On clear day, spray Triazophos 40 EC@4ml/lit water with sticker (@1ml/lit)
			VEGETABLES
Ginger/turmeric Summer Vegetables	Vegetative stage Multiple stages	Soft Rot	 Cultural practice like weeding/earthing up is recommended followed by basal dose of fertilizers For management of soft rot in ginger: Need based drencing of Metalaxyl-8% + Mancozeb 64% WP @ 2.5 g per lit of water. Dust ash powder in cucurbits Use pheromone traps/light traps against brinjal shoot and frui borer. Proper scientific cultural practices to be carried out in al vegetables viz. cleaning, earthing up, weeding, proper drainage etc.
			FRUIT CROPS
Large Cardamom	Flowering stage	Chirkey Disease	 Remove diseased part & keep inflorescence clean. Need based spray of broad spectrum fungicide like carbendazim @2g/lit water.
Orchards	Multiple stages		 Prepare half moon terraces in fruit crops (orange/banana/apple/peach) grown in steep slopes to prevent nutrient loss during heavy downpour. Follow proper drainage and earthing up practices in low land/plain areas to avoid water stagnation in fruit orchards
Pineapple	Vegetative stage		• Remove excess suckers and spray NAA@100ppm to increase fruit size and improve quality.
Banana	Bunching & planting		 Remove excess sucker from Banana in mother plant and give support in banana bunches to protect falling due to heavy weight or storm. Sword suckers with stout base, tapering towards the top with narrow leaves should be selected for planting at 3m x 3m spacing.
Toko Palm and other MPTs	Seedling	A	 Transplantation of seedling in filed followed by application of basal dose of fertilizers. Suitable time for transplanting of seedlings cuttings in the fields. High time of Insect attack, apply Bordeaux mixture or

			lime.
			LIVESTOCKS
Livestock	Stage	Disease	Precautionary Practices to be followed
Pigs	All stages		Provide concentrate feed and multi-vitamins
			• Vaccination as per the schedule with proper consultation with vet.
			Deworm at regular interval
Poultry	All stages		Provide anticoccidial drugs as preventive dose
			• Vaccinate DOC chicks against RD/F1 on 4 th day after birth & booster dose after 1 months.
Fishery			• Right time for stocking of fish fingerlings in fish tank with stocking density @1/m ²
			• Broadcast mustard Oil Cake (MOC) @5kg/day over the pond twice daily to feed fish fingerlings
Cattle/Mithun	All stages	FMD	Vaccination is advocated
Contact Scien	Contact Scientists (ICAR) or State Agril Staff or KVK staff for measures against adverse conditions or call at 03795-226237/226247		

Agro-met Advisory Bulletin

(Period: 22nd to 26th July, 2016)

ग्रामीण कृषि मौसम सेवा

(Integrated Agro-Meteorological Advisory Services)

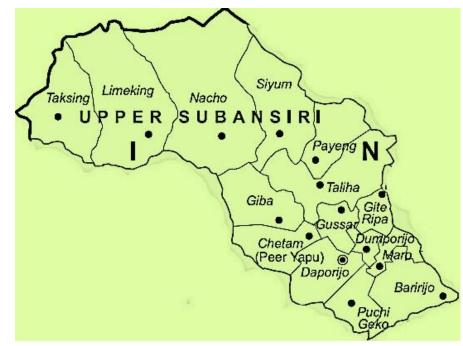

ICAR Research Complex for NEH Region Arunachal Pradesh Centre, Basar-791101

District: Upper Subansiri

<u>No: 59/2015-16/Fri</u>

Dated: 22nd July, 2016

Weather summery of the previous week	Weather forecast valid up to 26 th July, 2016
Rainfall = 0.0 mm (Puchi Geko); Daporijo:	NA
12.2 mm	
Warning	NIL

Weather Based Agro-meteorological Advisories Bulletin

- Disinfecting the animal/bird sheds with lime powder/ bleaching powder/ 4%NaOH at regular interval is advocated
- Avoid spray of insecticides during flowering stage as it may hinder pollination by honey bees and other insects.
- Spraying operation should be done only on dry/clear weather
- Go for low cost polyhouses for year round cultivation of vegetables
- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- ICAR Basar recommend poultry variety VANARAJA for backyard rearing

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
	8		FIELD CROPS
Wetland Rice	Nursery/ Transplantatio n	Stem borer / thrips	 Before transplanting, follow seedling root-dip treatment in chlorpyriphos 20 EC@ 2ml/10 lit for 12 hrs. Before transplanting, clip off the tip of seedlings to prevent infestation. On clear day, spray Triazophos 40 EC@4ml/lit water with sticker (@1ml/lit)
<i>Jhum</i> Rice/upland rice	Tillering stage		 In upland rice, spraying of 1% DAP is recommended to increase the nos. of effective tillers and yields. Carry out top dressing in upland rice of 2/3rd of recommended dose of urea. Maintain periphery of nursery field weed free and clean to prevent disease and pest harboring in weeds.
Pulses/Ground nut	Vegetative stage	Cercospora Leaf spot	 Spray azadirachtin 0.15 EC@ 1 ml/lit against Epicauta settle in soybean Foliar spray of carbandazim/Mancozab@2gm/lit Manual weeding in greengram/blackgram Proper drainage to avoid excess moisture or water logging. Complete earthing up before 45-50 days after sowing.
			VEGETABLES
Tomato	Fruiting		 Removing sideshoots is an important job which prevents the fruits being shaded by leaves. As temperatures rise, keep watering your plants, but avoid watering the leaves excessively that may lead to disease infestation.
Ginger/turmeric	Vegetative stage	Soft Rot	 Cultural practice like weeding/earthing up is recommended followed by basal dose of fertilizers For management of soft rot in ginger: Need based drencing of Metalaxyl-8% + Mancozeb 64% WP @ 2.5 g per lit of water.
Summer Vegetables	Multiple stages		 Use pheromone traps/light traps against brinjal shoot and fruit borer. Proper scientific cultural practices to be carried out in all vegetables viz. cleaning, earthing up, weeding, proper drainage etc. New nursery should be raised inside well covered structure with a raised bed to protect against continuous rain/shower.
			FRUIT CROPS
Large Cardamom	Flowering stage	Chirkey Disease	 Remove diseased part & keep inflorescence clean. Need based spray of broad spectrum fungicide like carbendazim @2g/lit water.
Orchards	Multiple stages		 Prepare half moon terraces in fruit crops (orange/banana/apple/peach) grown in steep slopes to prevent nutrient loss during heavy downpour. Follow proper drainage and earthing up practices in low land/plain areas to avoid water stagnation in fruit orchards
Pineapple	Vegetative stage		 Remove excess suckers and spray NAA@100ppm to increase fruit size and improve quality.
Banana	Bunching & planting		 Desuckering of banana to be done leaving one suckers per plant to maintain the health of mother plant. Remove the male flower in banana bunches to attain better finger/fruit size. Remove excess sucker from Banana in mother plant and

Toko Palm and other MPTs	Seedling	2	 heavy weight or storm. Sword suckers with stout base, tapering towards the top with narrow leaves should be selected for planting at 3m x 3m spacing.
