AMFU, ICAR Research Complex for NEH Region
Arunachal Pradesh Centre, Basar-791101

Advisory for district: Anjaw

Hawai: Latitude: 28.2179994/ Longitude: 94.7277528/Altitude: 1296 m amsl

Weather summary of the previous week	Weather forecast valid up to 20 th May 2018
No weather summary available	Partly cloudy with possibility of light/moderate rainfall. Daily maximum and minimum temperature for the following period is predicted to be 26-27°C and 14-15°C respectively. Expected morning and evening relative humidity will be 98-99% and 57-60% respectively. Wind direction is mainly E & NE with average wind speed range of 2-4 kmph.
Warning:	• Nil

GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Rice	Nursery/trans plantation	Stem borer	<ul style="list-style-type: none">• On anticipation of rain, provide proper drainage to the nursery/main field to avoid runoff• Rice: Weed free & clean nursery periphery to prevent disease/pest harboring.• Wet seed treatment for 12hrs. in Carbendazim 50% WP (1g/litre of water) & Chlorpyrifos 20% EC (2ml in 10 litres of water) solution before sowing.• Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It

			will reduce the carryover of the infestation to the main field.
Jhum rice	Leaf elongation		<ul style="list-style-type: none"> • On anticipation of rain, provide proper drainage • Follow proper runoff management system to avoid loss of top soil due to heavy rainfall. • Keep the surrounding clean/ weedfree to avoid disease/pest harboring
Pea	Seed development	Powdery mildew/ leaf eating insects	<ul style="list-style-type: none"> ❖ Provide adequate drainage and avoid water stagnation near the base of the plants. ❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.
Toria/ Mustard	Maturity	Aphids	<ul style="list-style-type: none"> ❖ Provide adequate drainage ❖ If the infestation is high, Spray Dimethoate 30EC @2ml/litre against aphids in Rapeseed/Mustard using sticker or during clear/dry days.
VEGETABLES			
Ginger/ Turmeric	Sowing/ germination		<ul style="list-style-type: none"> ❖ Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil & conserve moisture during dry seasons.
Summer vegetables	Sowing		<ul style="list-style-type: none"> ❖ Right time for transplantation of healthy seedlings to main field from nursery ❖ Sowing advocated during clear/dry days ❖ Provide adequate drainage to already sown crops
HORTICULTURAL CROPS			
Peach	Fruit maturing	Fruit Fly	<ul style="list-style-type: none"> ❖ Install fruit fly pheromone traps, ❖ Collect and dispose off the fallen fruits. ❖ Clean basin,
Citrus	Flowering	Bark eating caterpillar	<ul style="list-style-type: none"> • Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.
Orchards (Orange, Banana, Apple, Peach etc)			<ul style="list-style-type: none"> ❖ Prepare half moon terraces in fruit crops grown in steep slopes to prevent nutrient loss during heavy downpour.
Banana	Bunching	Cold	<ul style="list-style-type: none"> ❖ Cover newly emerged bunches with locally available sack to protect from cold/frost
Large cardamom	Sowing		<ul style="list-style-type: none"> ❖ Sowing in primary nursery bed at 2cm depth & 10cm apart with mulching & regular irrigation. ❖ Applications of well decomposed cattle manure/compost @5kg/plant during clear/dry days.
LIVESTOCKS			
Livestock	Stage	Disease	❖ Precautionary Practices to be followed
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	<ul style="list-style-type: none"> ❖ Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds. ❖ Avoid dampness and cover weak and sick animals with sack cloth. ❖ The bedding is always dry and that there is plenty. ❖ Animals should be given lukewarm feed and water. ❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.
Poultry	All stages		<ul style="list-style-type: none"> ❖ Provide shelter to the backyard/scavenging poultry. Feed grains in the morning/evening to supplement scavenging. ❖ Day old chick-Maintain warmth by lighting,
Fishery			<ul style="list-style-type: none"> ❖ To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.
Cattle	All stages	FMD	<ul style="list-style-type: none"> ❖ Animals should be given lukewarm feed and water. ❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight. ❖ Provide proper bedding materials especially to new-born and lukewarm food & water

			❖ Provide feed supplements
Mithun		FMD	❖ Polyvalent FMD vaccine with serotype O, A and Asia at 6 months of age and repeat after that 6 months interval by sub-cutaneous route. Pregnant animals above 7 months of pregnancy should be avoided from vaccination.

Advisory for district: Changlang

Changlang (HQ): Latitude: 27.1305856/Longitude: 95.7342373/Altitude: 580 masl

Weather summary of the previous week	Weather forecast valid up to 20 th May 2018
Rainfall = Changlang: 0.0 mm Miao: 19.4 mm (up to 17 th April)	Partly cloudy with possibility of light/moderate rain after 18 th May. Daily maximum and minimum temperature for the following period is predicted to be 29-30°C and 19-20°C respectively. Expected morning and evening relative humidity will be 80-98% and 36-43% respectively. Wind direction is mainly E & ESE with speed range of 2-4 kmph.
Warning	• Nil

GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Jhum rice	Rooting/ Leaf elongation		<ul style="list-style-type: none">Provide proper drainage and soil conservation measures like mulching with locally available materials.Keep the periphery cleanAvoid application of fertilizer and insecticides/pesticides
Rice	Transplanting/ knee height	Stem borer	<ul style="list-style-type: none">Rice: Weed free & clean nursery periphery to prevent disease/pest harboring.

			<ul style="list-style-type: none"> Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field. Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.
Maize	Vegetative	Soybean looper	<ul style="list-style-type: none"> ❖ Spraying of Quinalphos 25 EC 2ml/litre of water is advised, ❖ Monitor the crop against attack of insect pests, ❖ Make proper drainage in the crop field,
Pea	Seed development/ maturity	Powdery mildew/ leaf eating insects	<ul style="list-style-type: none"> ❖ Harvest mature crops ❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.
VEGETABLES			
Ginger/ Turmeric	Sowing/ germination		❖ Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil & conserve moisture during dry seasons.
Cucurbits	Vegetative		❖ Cover the base of crop with locally available mulches to avoid exposure to erosion.,
French Bean	Sowing		<ul style="list-style-type: none"> ❖ In present weather conditions, sowing of quality seeds may be done, ❖ Treat the seeds with Imidacloprid 17SL @1ml/litre/ kilogram seed before sowing.
Okra	Sowing		<ul style="list-style-type: none"> ❖ Procure quality seed from certified agency. ❖ Avoid sowing during rainy days
Summer vegetables	Sowing/ vegetative	Flea beetles/ fungal diseases	<ul style="list-style-type: none"> ❖ During clear/dry days, spray azadirachtin0.15EC@6ml/lit against flea beetles ❖ During clear/dry days, spray carbandazim/Mancozab@2gm/lit to control fungal diseases in summer vegetables.
HORTICULTURAL CROPS			
Guava	Flowering		<ul style="list-style-type: none"> ❖ Avoid water logging in the basin, ❖ Basin cleaning in half moon system is advised,
Citrus	Flowering	Bark eating caterpillar	<ul style="list-style-type: none"> • Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.
Large cardamom	Sowing		<ul style="list-style-type: none"> ❖ Sowing in primary nursery bed at 2cm depth & 10cm apart with mulching & regular irrigation. ❖ Applications of well decomposed cattle manure/compost @5kg/plant during clear/dry days.
Banana	Bunching		❖ Denavelling (removal of male bud) & bagging of bunches advocated..
HONEY BEES			
Honey bees			<ul style="list-style-type: none"> ❖ Box must be covered with straw/dry leaves to provide warmth ❖ Provide sugar syrup
LIVESTOCKS			
Livestock	Stage	Disease	❖ Precautionary Practices to be followed
❖ General ❖ Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding ❖ Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,			
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	<ul style="list-style-type: none"> ❖ Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds. ❖ Avoid dampness and cover weak and sick animals with sack cloth. ❖ The bedding is always dry and that there is plenty. ❖ Animals should be given lukewarm feed and water. ❖ Right time to deworm with anti helmetic drugs (particularly

			Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.
Fishery			❖ To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.
Poultry	All stages		❖ Provide shelter to the backyard/scavenging poultry. ❖ Feed grains in the morning/evening to supplement scavenging.
Goat	All stages		❖ Deworming for gastrointestinal parasite
Cattle	All stages	FMD	❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight. ❖ Provide proper bedding materials especially to new-born and lukewarm food & water ❖ Provide feed supplements

Koloriang: Latitude: 27.9167°/Longitude: 93.3500°/Altitude: 1040 masl

Weather summary of the previous week	Weather forecast valid up to 20 th May 2018
Past weather summary not available	Partly/mostly cloudy with possibility of moderate rain. Daily maximum and minimum temperature for the following period is predicted to be 23-24°C and 11-12°C respectively. Expected morning and evening relative humidity will be 91-92% and 64-72% respectively. Wind direction is mainly SE & SSE with wind speed range of 3-4 kmph.
Warning	• Nil

GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Jhum rice	Leaf elongation		<ul style="list-style-type: none">• On anticipation of rain, provide proper drainage• Follow proper runoff management system to avoid loss of top soil due to heavy rainfall.• Keep the surrounding clean/ weedfree to avoid disease/pest harboring
Rice	Nursery/trans plantation	Stem borer	<ul style="list-style-type: none">• On anticipation of rain, provide proper drainage to the nursery/main field to avoid runoff

			<ul style="list-style-type: none"> • Rice: Weed free & clean nursery periphery to prevent disease/pest harboring. • Wet seed treatment for 12hrs. in Carbendazim 50% WP (1g/litre of water) & Chlorpyrifos 20% EC (2ml in 10 litres of water) solution before sowing. • Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field. • Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.
Pea	Seed development	Powdery mildew/ leaf eating insects	<ul style="list-style-type: none"> ❖ Provide adequate drainage and avoid water stagnation near the base of the plants. ❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.
Toria/ Mustard	Maturity	Aphids	<ul style="list-style-type: none"> ❖ Provide adequate drainage ❖ If the infestation is high, Spray Dimethoate 30EC @2ml/litre against aphids in Rapeseed/Mustard using sticker or during clear/dry days.
VEGETABLES			
Cucurbits	Vegetative		❖ Cover the base of crop with locally available mulches to avoid exposure to erosion,.
Ginger/ Turmeric	Sowing/ germination		❖ Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil & conserve moisture during dry seasons.
Summer vegetables	Sowing		❖ Sowing advocated during clear/dry days
Cabbage/ Cauliflower	Harvesting		<ul style="list-style-type: none"> ❖ Harvest mature crop. ❖ Constantly monitor against attack of insects pests/mole.
HORTICULTURAL CROPS			
Peach	Fruit maturing	Fruit Fly	<ul style="list-style-type: none"> ❖ Install fruit fly pheromone traps, ❖ Collect and dispose off the fallen fruits. ❖ Clean basin,
Large cardamom	Sowing		❖ Sowing in primary nursery bed at 2cm depth & 10cm apart with mulching & regular irrigation.
Citrus	Flowering	Bark eating caterpillar	<ul style="list-style-type: none"> • Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.
Apple	Flowering		❖ Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.
Temperate fruits	After harvesting		<ul style="list-style-type: none"> ❖ Training & pruning of the temperate crops (apple/pears/peach) is recommended ❖ In case of flowering, stop spraying insecticides/pesticides
Pineapple	Harvesting		❖ After winter harvest, collection/Selection of suckers & slip to be done for next season planting
Kiwi	Flowering		❖ Kiwi fruit vine should be covered with 50% shade net to protect flowers from heavy rain and hail storm.
Banana	Bunching	Cold	<ul style="list-style-type: none"> ❖ Cover newly emerged bunches with locally available sack to protect from cold/frost ❖ Mulching with straw/crop residue at root zone to avoid frost injury in banana.
Honey Bees			
			❖ Box must be covered with straw/dry leaves to provide warmth
LIVESTOCKS			
General <ul style="list-style-type: none"> ❖ Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding ❖ Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,

Weather summary of the previous week	Weather forecast valid up to 20 th May 2018
Rainfall = 42.4 mm (up to 17 th April)	Partly cloudy with possibility of light/moderate rainfall. Daily maximum and minimum temperature for the following period is predicted to be 29-30°C and 18-19°C respectively. Expected morning and evening relative humidity will be 91-96% and 48-55% respectively. Wind direction is mainly NE & ENE with speed range of 2-4 kmph.
Warning:	• Nil

GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Jhum rice	Rooting/ Leaf elongation		<ul style="list-style-type: none">• Provide proper drainage and soil conservation measures like mulching with locally available materials.• Keep the periphery clean• Avoid application of fertilizer and insecticides/pesticides
Rice	Nursery/trans plantation	Stem borer	<ul style="list-style-type: none">• Rice: Weed free & clean nursery periphery to prevent disease/pest harboring.• Wet seed treatment for 12hrs. in Carbendazim 50% WP (1g/litre of water) & Chlorpyrifos 20% EC (2ml in 10

			litres of water) solution before sowing. <ul style="list-style-type: none"> Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field. Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.
Maize	Vegetative	Soybean looper	❖ Spraying of Quinalphos 25 EC 2ml/litre of water is advised, ❖ Monitor the crop against attack of insect pests, ❖ Make proper drainage in the crop field,
Pea	Seed development	Powdery mildew/ leaf eating insects	❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.
VEGETABLES			
Summer vegetables	Sowing/ vegetative	Flea beetles/ fungal diseases	❖ During clear/dry days, spray azadirachtin 0.15EC@6ml/lit against flea beetles ❖ During clear/dry days, spray carbandazim/Mancozab@2gm/lit to control fungal diseases in summer vegetables.
Cucurbits	Vegetative		❖ Cover the base of crop with locally available mulches to avoid exposure to erosion.,
Ginger/ Turmeric	Sowing/ germination		❖ Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil & conserve moisture during dry seasons.
French Bean	Sowing		❖ Sowing of quality seeds advocated
Okra	Sowing		❖ Proper drainage to already sown crops ❖ Avoid fresh sowing
HORTICULTURAL CROPS			
Guava	Flowering		❖ Avoid water logging in the basin, ❖ Basin cleaning in half moon system is advised,
Banana	Bunching		❖ Denavelling (removal of male bud) & bagging of bunches advocated..
Citrus	Flowering	Bark eating caterpillar	<ul style="list-style-type: none"> Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.
Kiwi	Pruning/Training		❖ Diseased and senile branches should be removed. ❖ Pruning should be done retaining 8-10 buds per branch for enhancing new flush and flowering. ❖ Pruned healthy hard wood of pencil thickness size having 4-5 buds can be used as cutting for propagation
Large Cardamom	Fruiting	Chirkey Disease	❖ Remove dry/diseased/old tillers & branches & spray Bio NPK@ 2ml/lit water for proper growth on clear/dry days.
Honey Bees			
Honey bees			❖ Cover the boxes with locally available dry grass or straw to provide warmth
LIVESTOCKS			
Livestock	Stage	Disease	Precautionary Practices to be followed
❖ General ❖ Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding ❖ Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,

Weather summary of the previous week	Weather forecast valid up to 20 th May 2018
Rainfall = NA	Partly cloudy with possibility of moderate rainfall. Daily maximum and minimum temperature for the following period is predicted to be 30-31°C and 16-17°C respectively. Expected morning and evening relative humidity will be 94-95% and 57-61% respectively. Wind direction is mainly SSE & S with speed range of 2-3 kmph.
Warning:	• Nil

GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Jhum rice	Leaf elongation		<ul style="list-style-type: none">• On anticipation of rain, provide proper drainage• Follow proper runoff management system to avoid loss of top soil due to heavy rainfall.• Keep the surrounding clean/ weedfree to avoid disease/pest harboring
Rice	Nursery/trans	Stem borer	<ul style="list-style-type: none">• On anticipation of rain, provide proper drainage to the

	plantation		nursery/main field to avoid runoff <ul style="list-style-type: none"> • Rice: Weed free & clean nursery periphery to prevent disease/pest harboring. • Wet seed treatment for 12hrs. in Carbendazim 50% WP (1g/litre of water) & Chlorpyriphos 20% EC (2ml in 10 litres of water) solution before sowing. • Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field. • Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.
Pea	Seed development	Powdery mildew/ leaf eating insects	❖ Provide adequate drainage and avoid water stagnation near the base of the plants. ❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.
Toria/ Mustard	Seed formation/ ripening	Aphids	❖ Suspend spray operations. ❖ Spray Dimethoate 30EC @2ml/litre against aphids in Rapeseed/Mustard on clear/dry days.
VEGETABLES			
Cucurbits	Vegetative		❖ Cover the base of crop with locally available mulches to avoid exposure to erosion,.
Ginger/ Turmeric	Sowing/ germination		❖ Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil & conserve moisture during dry seasons.
Pre-summer vegetables	Sowing	Nursery insects	<ul style="list-style-type: none"> • Right time for transplanting the ready seedlings of chili, tomato, capsicum etc. • Provide proper drainage to newly transplanted seedlings and follow raised bed for sowing • Spray Azadirachtin 1% (10000 PPM) @ 1000-1500 ml in 500 litres water/ha against nursery insects
HORTICULTURAL CROPS			
Peach	Fruit maturing	Fruit Fly	❖ Install fruit fly pheromone traps, ❖ Collect and dispose off the fallen fruits. ❖ Clean basin,
Guava	Flowering		❖ Avoid water logging in the basin, ❖ Basin cleaning in half moon system is advised,
Citrus	Flowering	Bark eating caterpillar	<ul style="list-style-type: none"> • Foliar application of Boron + Zinc @ 0.2% or multiplex @ 0.2% i.e 2g/lit of water to improve the yield and quality of fruits during clear/sunny days. • Cleaning & smearing of trunk base with Bordeaux paste. • Budding method of propagation (T-budding) to commences in oranges using Rangpur lime as rootstock. • If flowering begins, avoid spray of insecticides/ pesticides as it may affect pollination process. • Spray (Planofix) NAA based growth regulator @2m/5lit water during flowering stage in orange plant to reduce fruit/flower drop • For bark eating caterpillar, remove wooden frass and inject Dichlorovos (0.1%) @ 5ml with disposable syringe. • Dead wood on the citrus trees should be kept pruned, about 2cm, below the dead portion.
Large cardamom	Sowing		❖ Sowing in primary nursery bed at 2cm depth & 10cm apart with mulching & regular irrigation. ❖ Applications of well decomposed cattle manure/compost @5kg/plant during clear/dry days.
Kiwi	Flowering		❖ Kiwi fruit vine should be covered with 50% shade net to protect flowers from heavy rain and hail storm.
Apple	Flowering		❖ For woody aphid-Wipe the stem with cloth soaked in mineral oil. ❖ In bearing trees give a spray of Bordeaux mixture (copper

			sulphate (2Kg)+quick lime (2kg) in 200litres of water) against canker and other diseases.
Temperate fruits	After harvesting		❖ Training & pruning of the temperate crops (apple/pears/peach) is recommended ❖ In case of flowering, stop spraying insecticides/pesticides
Agroforestry			
Toko palm	Nursery		❖ Filling of nursery polybags for raising of takopalm seedlings
Honey Bees			
Honey bees			❖ Box must be covered with straw/dry leaves to provide warmth
LIVESTOCKS			
Livestock	Stage	Disease	❖ Precautionary Practices to be followed
❖ General ❖ Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding ❖ Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,			
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	❖ Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds. ❖ Avoid dampness and cover weak and sick animals with sack cloth. ❖ The bedding is always dry and that there is plenty. ❖ Animals should be given lukewarm feed and water. ❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.
Fishery			❖ To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	❖ Avoid dampness and cover weak and sick animals with sack cloth. ❖ The bedding is always dry and that there is plenty. ❖ If possible wooden sleeping box should be provided. ❖ Animals should be given lukewarm feed and water. ❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.
Cattle	All stages	FMD	❖ Animals should be given lukewarm feed and water. ❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight. ❖ Provide proper bedding materials especially to new-born and lukewarm food & water ❖ Provide feed supplements
Mithun		FMD	❖ Polyvalent FMD vaccine with serotype O, A and Asia at 6 months of age and repeat after that 6 months interval by sub-cutaneous route. ❖ Pregnant animals above 7 months of pregnancy should be avoided.

Advisory for district: Papum Pare

Weather summary of the previous week	Weather forecast valid up to 20 th May 2018
Rainfall: 43.9 mm; T. Max: 34.0°C; T. Min: 18.0°C ; RH: 64-88% (up to 17 th April)	Partly cloudy with possibility of moderate rain. Daily maximum and minimum temperature for the following period is predicted to be 30-32°C and 20-21°C respectively. Expected morning and evening relative humidity will be 88-97% and 58-70% respectively. Expected wind direction mainly variable with speed range of 2-3 kmph.
Warning:	•

GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- **Warning: Spraying of DDT in crops is lethal**

DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Maize	Vegetative	Soybean looper	<ul style="list-style-type: none"> ❖ Spraying of Quinalphos 25 EC 2ml/litre of water is advised, ❖ Monitor the crop against attack of insect pests, ❖ Make proper drainage in the crop field,
Jhum rice	Rooting/ Leaf elongation		<ul style="list-style-type: none"> • Provide proper drainage and soil conservation measures like mulching with locally available materials. • Keep the periphery clean

			<ul style="list-style-type: none">• Avoid application of fertilizer and insecticides/pesticides
Rice	Nursery/trans plantation	Stem borer	<ul style="list-style-type: none">• Rice: Weed free & clean nursery periphery to prevent disease/pest harboring.• Wet seed treatment for 12hrs. in Carbendazim 50% WP (1g/litre of water) & Chlorpyriphos 20% EC (2ml in 10 litres of water) solution before sowing.• Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field.• Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.
VEGETABLES			
Cucurbits	Vegetative		❖ Cover the base of crop with locally available mulches to avoid exposure to erosion.,
Summer vegetables	Sowing/vegetative	Flea beetles/ fungal diseases	<ul style="list-style-type: none">❖ During clear/dry days, spray azadirachtin <u>0.15EC@6ml/lit</u> against flea beetles❖ During clear/dry days, spray carbandazim/Mancozab@2gm/lit to control fungal diseases in summer vegetables.
French Bean	vegetative		<ul style="list-style-type: none">❖ Proper drainage should be provided❖
Ginger/ Turmeric	Sowing/germination		❖ Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil & conserve moisture during dry seasons.
HORTICULTURAL CROPS			
Guava	Flowering		<ul style="list-style-type: none">❖ Avoid water logging in the basin,❖ Basin cleaning in half moon system is advised,
Citrus	Flowering	Bark eating caterpillar	<ul style="list-style-type: none">• Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.
Banana	Bunching		❖ Denavelling (removal of male bud) & bagging of bunches advocated..
Large Cardamom	Vegetative		❖ Provide proper drainage to avoid water stagnation in the base of the plant.
Honey Bees			
Honey bees			❖ Box must be covered with straw/dry leaves to provide warmth
LIVESTOCKS			
Livestock	Stage	Disease	Precautionary Practices to be followed
General <ul style="list-style-type: none">❖ Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding❖ Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,			
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	<ul style="list-style-type: none">❖ Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds.❖ Avoid dampness and cover weak and sick animals with sack cloth.❖ The bedding is always dry and that there is plenty.❖ Animals should be given lukewarm feed and water.❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.
Fishery			❖ To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.
Poultry	All stages		<ul style="list-style-type: none">❖ Provide shelter to the backyard/scavenging poultry. Feed grains in the morning/evening to supplement scavenging.❖ Day old chick-Maintain warmth by lighting,❖ Inclusion of turmeric powder @ 10g/kg feed for prevention of coccidiosis.

Goat	All stages		❖ Deworming for gastrointestinal parasite
Cattle	All stages	FMD	❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight. ❖ Provide proper bedding materials especially to new-born and lukewarm food & water ❖ Provide feed supplements

Warning:	<ul style="list-style-type: none">Moderate to dense fog likely to occur at isolated places

GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Jhum rice	Leaf elongation		<ul style="list-style-type: none">On anticipation of rain, provide proper drainageFollow proper runoff management system to avoid loss of top soil due to heavy rainfall.Keep the surrounding clean/ weedfree to avoid disease/pest harboring

Rice	Nursery/trans plantation	Stem borer	<ul style="list-style-type: none"> • On anticipation of rain, provide proper drainage to the nursery/main field to avoid runoff • Rice: Weed free & clean nursery periphery to prevent disease/pest harboring. • Wet seed treatment for 12hrs. in Carbendazim 50% WP (1g/litre of water) & Chlorpyriphos 20% EC (2ml in 10 litres of water) solution before sowing. • Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field. • Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.
Pea	Seed development	Powdery mildew/ leaf eating insects	❖ Provide adequate drainage and avoid water stagnation near the base of the plants.
VEGETABLES			
Cucurbits	Vegetative		❖ Cover the base of crop with locally available mulches to avoid exposure to erosion,. ❖ Avoid water stagnation near the base of the plant through proper drainage
Ginger/ Turmeric	Sowing/ germination		❖ Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil & conserve moisture during dry seasons.
HORTICULTURAL CROPS			
Peach	Fruit maturing	Fruit Fly	❖ Install fruit fly pheromone traps, ❖ Collect and dispose off the fallen fruits. ❖ Clean basin,
Kiwi	Flowering		❖ Kiwi fruit vine should be covered with 50% shade net to protect flowers from heavy rain and hail storm.
Apple	Flowering		❖ For woody aphid-Wipe the stem with cloth soaked in mineral oil. ❖ In bearing trees give a spray of Bordeaux mixture (copper sulphate (2Kg)+quick lime (2kg) in 200litres of water) against canker and other diseases.
Banana	Bunching	Cold	❖ Cover newly emerged bunches with locally available sack to protect from cold/frost
LIVESTOCKS			
Livestock	Stage	Disease	❖ Precautionary Practices to be followed
❖ General ❖ Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding ❖ Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,			
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	❖ Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds. ❖ Avoid dampness and cover weak and sick animals with sack cloth. ❖ The bedding is always dry and that there is plenty. ❖ Animals should be given lukewarm feed and water. ❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.
Fishery			❖ To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.
Yak	All stages		❖ Feeding of concentrate feed along with mineral mixture and salt. ❖ Hay feeding is recommended.
Poultry	All stages		❖ Provide shelter to the backyard/scavenging poultry. Feed grains in the morning/evening to supplement scavenging. ❖ Day old chick-Maintain warmth by lighting, ❖ In present weather conditions protect the birds from cold by

			<p>using gunny bags/plastic sheets around the poultry shed during night,</p> <ul style="list-style-type: none">❖ Provide heat by lighting 100W bulb @ 1 bulb per 20 newly born chicks.
Cattle	All stages	FMD	<ul style="list-style-type: none">❖ Animals should be given lukewarm feed and water.❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.❖ Provide proper bedding materials especially to new-born and lukewarm food & water❖ Heavy mortality in cloven footed animals has been reported.❖ Supportive treatment of infected animals under supervision of veterinary department officials,❖ Avoid mixing of infected and healthy animals,❖ Keep infected animals separated from the healthy ones,❖ Vaccinate the healthy animals against FMD (Through State Veterinary Dept.)❖ Provide feed supplements
Mithun		FMD	<ul style="list-style-type: none">❖ Polyvalent FMD vaccine with serotype O, A and Asia at 6 months of age and repeat after that 6 months interval by sub-cutaneous route.❖ Pregnant animals above 7 months of pregnancy should be avoided.

DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Jhum rice	Rooting/ Leaf elongation		<ul style="list-style-type: none">❖ Provide proper drainage and soil conservation measures like mulching with locally available materials.❖ Keep the periphery clean❖ Avoid application of fertilizer and insecticides/pesticides

Rice	Nursery/transplantation	Stem borer	<ul style="list-style-type: none"> ❖ Rice: Weed free & clean nursery periphery to prevent disease/pest harboring. ❖ Wet seed treatment for 12hrs. in Carbendazim 50% WP (1g/litre of water) & Chlorpyrifos 20% EC (2ml in 10 litres of water) solution before sowing. ❖ Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field. ❖ Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.
Maize	Vegetative	Soybean looper	<ul style="list-style-type: none"> ❖ Avoid water stagnation in the field by making proper drainage ❖ Keep the periphery of the field clean and weed free
Pea	Seed development	Powdery mildew/ leaf eating insects	<ul style="list-style-type: none"> ❖ Provide adequate drainage and avoid water stagnation near the base of the plants.
VEGETABLES			
Cucurbits	Vegetative		<ul style="list-style-type: none"> ❖ Cover the base of crop with locally available mulches to avoid exposure to erosion., ❖ Avoid water stagnation near the base of the plant through proper drainage
Ginger/ Turmeric	Sowing/ germination		<ul style="list-style-type: none"> ❖ Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil & conserve moisture during dry seasons.
French Bean	Vegetative		<ul style="list-style-type: none"> ❖ Avoid water stagnation in field by making proper drainage.
HORTICULTURAL CROPS			
Peach	Fruit maturing	Fruit Fly	<ul style="list-style-type: none"> ❖ Install fruit fly pheromone traps, ❖ Collect and dispose off the fallen fruits. ❖ Clean basin,
Guava	Flowering		<ul style="list-style-type: none"> ❖ Avoid water logging in the basin, ❖ Basin cleaning in half moon system is advised,
Citrus	Flowering	Bark eating caterpillar	<ul style="list-style-type: none"> • Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.
Banana	Bunching		<ul style="list-style-type: none"> ❖ Denavelling (removal of male bud) & bagging of bunches advocated..
Kiwi	Flowering		<ul style="list-style-type: none"> ❖ Kiwi fruit vine should be covered with 50% shade net to protect flowers from heavy rain and hail storm.
Apple	Flowering		<ul style="list-style-type: none"> ❖ For woody aphid-Wipe the stem with cloth soaked in mineral oil. ❖ In bearing trees give a spray of Bordeaux mixture (copper sulphate (2Kg)+quick lime (2kg) in 200litres of water) against canker and other diseases.
Large cardamom	Sowing		<ul style="list-style-type: none"> ❖ Sowing in primary nursery bed at 2cm depth & 10cm apart with mulching & regular irrigation. ❖ Applications of well decomposed cattle manure/compost @5kg/plant during clear/dry days.
HONEY BEES			
Honey bees			<ul style="list-style-type: none"> ❖ Cover the boxes with locally available dry grass or straw to provide warmth
LIVESTOCKS			
Livestock	Stage	Disease	❖ Precautionary Practices to be followed
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	<ul style="list-style-type: none"> ❖ Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds. ❖ Avoid dampness and cover weak and sick animals with sack cloth. ❖ The bedding is always dry and that there is plenty. ❖ Animals should be given lukewarm feed and water.

			<ul style="list-style-type: none">❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.
Fishery			<ul style="list-style-type: none">❖ To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.
Poultry	All stages		<ul style="list-style-type: none">❖ Provide shelter to the backyard/scavenging poultry. Feed grains in the morning/evening to supplement scavenging.❖ Day old chick-Maintain warmth by lighting,❖ Inclusion of turmeric powder @ 10g/kg feed for prevention of coccidiosis.
Cattle	All stages	FMD	<ul style="list-style-type: none">❖ Animals should be given lukewarm feed and water.❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.❖ Provide feed supplements
Mithun		FMD	<ul style="list-style-type: none">❖ Polyvalent FMD vaccine with serotype O, A and Asia at 6 months of age and repeat after that 6 months interval by sub-cutaneous route.❖ Pregnant animals above 7 months of pregnancy should be avoided.
