## Agro-met Advisory Bulletin

(Period: 23<sup>rd</sup> to 25<sup>th</sup> May, 2018)

No: AMFU-Basar/2018/41

Dated: Tue, 22<sup>nd</sup> May, 2018

ग्रामीण कृषि मौसम सेवा

GRAMIN KRISHI MAUSAM SEWA  
(Integrated Agro-Meteorological Advisory Services)

AMFU, ICAR Research Complex for NEH Region  
Arunachal Pradesh Centre, Basar-791101

Advisory for district: Anjaw

Hawai: Latitude: 28.2179994/ Longitude: 94.7277528/Altitude: 1296 m amsl

Weather summary of the previous week	Weather forecast valid up to 27 <sup>th</sup> May 2018
No weather summary available	Mostly cloudy with possibility of moderate to rather heavy rainfall. Daily maximum and minimum temperature for the following period is predicted to be 27-29°C and 15-16°C respectively. Expected morning and evening relative humidity will be 90-97% and 68-78% respectively. Wind direction is mainly ESE & E with average wind speed range of 2-5 kmph.
Warning:	• Nil

### GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

### DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Rice	Transplantation / leaf elongation	Stem borer	<ul style="list-style-type: none"><li>• On anticipation of rain, provide proper drainage to the nursery/main field to avoid runoff</li><li>• Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</li><li>• Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.</li></ul>
Jhum rice	Leaf elongation		<ul style="list-style-type: none"><li>• On anticipation of rain, provide proper drainage</li><li>• Follow proper runoff management system to avoid</li></ul>

			<b>loss of top soil due to heavy rainfall.</b> <ul style="list-style-type: none"> <li>Keep the surrounding clean/ weed free to avoid <b>disease/pest harboring</b></li> <li>Manual weeding advocated during clear dry days.</li> </ul>
Pea	Maturity	Powdery mildew/ leaf eating insects	<ul style="list-style-type: none"> <li><b>Green pods can be harvested during sunny days</b></li> <li>❖ Provide adequate drainage and avoid water stagnation near the base of the plants.</li> <li>❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.</li> </ul>
Toria/ Mustard	Harvesting	Aphids	<ul style="list-style-type: none"> <li>❖ <b>Harvest during clear/dry days</b></li> <li>❖ Provide adequate drainage</li> <li>❖ If the infestation is high, Spray Dimethoate 30EC @2ml/litre against aphids in Rapeseed/Mustard using sticker or during clear/dry days.</li> </ul>
<b>VEGETABLES</b>			
Ginger/ Turmeric	Sowing/ germination		<ul style="list-style-type: none"> <li>❖ <b>Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil &amp; conserve moisture during dry seasons.</b></li> </ul>
Summer vegetables	Sowing		<ul style="list-style-type: none"> <li>❖ <b>Right time for transplantation of healthy seedlings to main field from nursery</b></li> <li>❖ Sowing advocated during clear/dry days</li> <li>❖ Provide adequate drainage to already sown crops</li> </ul>
<b>HORTICULTURAL CROPS</b>			
Peach	Fruit maturing	Fruit Fly	<ul style="list-style-type: none"> <li>❖ <b>Install fruit fly pheromone traps,</b></li> <li>❖ <b>Collect and dispose off the fallen fruits.</b></li> <li>❖ <b>Clean basin,</b></li> </ul>
Citrus	Flowering	Fruit drop/ Phytophthora	<ul style="list-style-type: none"> <li>• <b>Foliar application of micronutrient/multiplex @ 0.2% should be done to prevent flower drop</b></li> <li>• During clear dry days, apply Bordeaux paste on the tree trunk upto the height of 24 inches by brush.</li> <li>• During clear dry days or using stickers during rain, spraying and drenching with metalaxyl MZ-72 @ 2.75 g/lit water on the tree against Phytophthora.</li> <li>• Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.</li> </ul>
Banana	Bunching	Cold	<ul style="list-style-type: none"> <li>❖ Cover newly emerged bunches with locally available sack to protect from cold/frost</li> </ul>
Large cardamom	Sowing		<ul style="list-style-type: none"> <li>❖ Sowing in primary nursery bed at 2cm depth &amp; 10cm apart with mulching &amp; regular irrigation.</li> <li>❖ <b>Applications of well decomposed cattle manure/compost @5kg/plant during clear/dry days.</b></li> </ul>
Apple	Fruiting	Fruit drop	<ul style="list-style-type: none"> <li>❖ <b>Spray 2,4,5-T @ 20ppm or 2,4,5-TCPA @ 15ppm to inhibit fruit drop</b></li> </ul>
<b>LIVESTOCKS</b>			
<b>Livestock</b>	<b>Stage</b>	<b>Disease</b>	<b>❖ Precautionary Practices to be followed</b>
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	<ul style="list-style-type: none"> <li>❖ <b>Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds.</b></li> <li>❖ Avoid dampness and cover weak and sick animals with sack cloth.</li> <li>❖ The bedding is always dry and that there is plenty.</li> <li>❖ Animals should be given lukewarm feed and water.</li> <li>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</li> </ul>
Poultry	All stages		<ul style="list-style-type: none"> <li>❖ <b>Provide shelter to the backyard/scavenging poultry. Feed grains in the morning/evening to supplement scavenging.</b></li> <li>❖ Day old chick-Maintain warmth by lighting,</li> </ul>
Fishery			<ul style="list-style-type: none"> <li>❖ <b>To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.</b></li> </ul>

			<ul style="list-style-type: none"><li>❖ Broadcast mustard Oil Cake (MOC) @5kg/day over the pond twice daily to feed fish fingerlings.</li></ul>
Cattle	All stages	FMD	<ul style="list-style-type: none"><li>❖ Animals should be given lukewarm feed and water.</li><li>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</li><li>❖ Provide proper bedding materials especially to new-born and lukewarm food &amp; water</li><li>❖ Provide feed supplements</li></ul>
Mithun		FMD	<ul style="list-style-type: none"><li>❖ Polyvalent FMD vaccine with serotype O, A and Asia at 6 months of age and repeat after that 6 months interval by sub-cutaneous route. Pregnant animals above 7 months of pregnancy should be avoided from vaccination.</li></ul>

## Agro-met Advisory Bulletin

(Period: 23<sup>rd</sup> to 25<sup>th</sup> May, 2018)

No: AMFU-Basar/2018/41

Dated: Tue, 22<sup>nd</sup> May, 2018

ग्रामीण कृषि मौसम सेवा

**GRAMIN KRISHI MAUSAM SEWA**  
(Integrated Agro-Meteorological Advisory Services)

AMFU, ICAR Research Complex for NEH Region  
Arunachal Pradesh Centre, Basar-791101

**Advisory for district: Changlang**

Changlang (HQ): Latitude: 27.1305856/Longitude: 95.7342373/Altitude: 580 masl

Weather summary of the previous week	Weather forecast valid up to 27 <sup>th</sup> May 2018
Rainfall = Changlang: 0.0 mm Miao: 19.4 mm (up to 17 <sup>th</sup> April)	Mostly cloudy with possibility of moderate to rather heavy rain. Daily maximum and minimum temperature for the following period is predicted to be 30-34°C and 20-21°C respectively. Expected morning and evening relative humidity will be 94-98% and 44-87% respectively. Wind direction is mainly E & ESE with speed range of 2-4 kmph.
<b>Warning</b>	• Nil

### GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

### DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
<b>FIELD CROPS</b>			
Jhum rice	Rooting/ Leaf elongation		<ul style="list-style-type: none"> <li>• Provide proper drainage and soil conservation measures like mulching with locally available materials.</li> <li>• Keep the periphery clean</li> <li>• Avoid application of fertilizer and insecticides/pesticides</li> </ul>
Rice	Leaf Elongation/	Stem borer	<ul style="list-style-type: none"> <li>• Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</li> </ul>

	Tillering		<ul style="list-style-type: none"> <li>Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field.</li> </ul>
Maize	Pod formation	Soybean looper	<ul style="list-style-type: none"> <li>❖ <b>Provide proper drainage</b></li> <li>❖ <b>Spray Azadirachtin 0.15% EC 2@ 6ml/lit</b></li> <li>❖ <b>Monitor the crop against attack of insect pests,</b></li> </ul>
Pea	Seed development/ maturity	Powdery mildew/ leaf eating insects	<ul style="list-style-type: none"> <li>❖ <b>Harvest mature crops</b></li> <li>❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.</li> </ul>
<b>VEGETABLES</b>			
Ginger/ Turmeric	Sowing/ germination		<ul style="list-style-type: none"> <li>❖ <b>Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil &amp; conserve moisture during dry seasons.</b></li> </ul>
Cucurbits	Vegetative		<ul style="list-style-type: none"> <li>❖ <b>Cover the base of crop with locally available mulches to avoid exposure to erosion,.</b></li> </ul>
French Bean	Sowing		<ul style="list-style-type: none"> <li>❖ In present weather conditions, sowing of quality seeds may be done,</li> <li>❖ Treat the seeds with Imidacloprid 17SL @1ml/litre/ kilogram seed before sowing.</li> </ul>
Okra	Sowing		<ul style="list-style-type: none"> <li>❖ Procure quality seed from certified agency.</li> <li>❖ Avoid sowing during rainy days</li> </ul>
Summer vegetables	Sowing/ vegetative	Flea beetles/ fungal diseases	<ul style="list-style-type: none"> <li>❖ During clear/dry days, spray azadirachtin<b>0.15EC@6ml/lit</b> against flea beetles</li> <li>❖ During clear/dry days, spray carbandazim/Mancozab@2gm/lit to control fungal diseases in summer vegetables.</li> </ul>
<b>HORTICULTURAL CROPS</b>			
Citrus	Flowering	Phytophthora	<ul style="list-style-type: none"> <li>• <b>During clear dry days, apply Bordeaux paste on the tree trunk upto the height of 24 inches by brush.</b></li> <li>• <b>During clear dry days or using stickers during rain, spraying and drenching with metalaxyl MZ-72 @ 2.75 g/lit water on the tree against Phytophthora.</b></li> <li>• Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.</li> </ul>
Guava	Flowering		<ul style="list-style-type: none"> <li>❖ <b>Avoid water logging in the basin,</b></li> <li>❖ <b>Basin cleaning in half moon system is advised,</b></li> </ul>
Large cardamom	Sowing		<ul style="list-style-type: none"> <li>❖ Sowing in primary nursery bed at 2cm depth &amp; 10cm apart with mulching &amp; regular irrigation.</li> <li>❖ <b>Applications of well decomposed cattle manure/compost @5kg/plant during clear/dry days.</b></li> </ul>
Banana	Bunching		<ul style="list-style-type: none"> <li>❖ Denavelling (removal of male bud) &amp; bagging of bunches advocated..</li> </ul>
<b>HONEY BEES</b>			
Honey bees			<ul style="list-style-type: none"> <li>❖ Box must be covered with straw/dry leaves to provide warmth</li> <li>❖ Provide sugar syrup</li> </ul>
<b>LIVESTOCKS</b>			
<b>Livestock</b>	<b>Stage</b>	<b>Disease</b>	❖ <b>Precautionary Practices to be followed</b>
❖ <b>General</b> ❖ <b>Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding</b> ❖ <b>Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,</b>			
Fishery			<ul style="list-style-type: none"> <li>❖ <b>To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.</b></li> <li>❖ <b>Broadcast mustard Oil Cake (MOC) @5kg/day over the pond twice daily to feed fish fingerlings.</b></li> </ul>
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.)	<ul style="list-style-type: none"> <li>❖ <b>Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds.</b></li> </ul>

		Swine Fever	<ul style="list-style-type: none"><li>❖ Avoid dampness and cover weak and sick animals with sack cloth.</li><li>❖ The bedding is always dry and that there is plenty.</li><li>❖ Animals should be given lukewarm feed and water.</li><li>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</li></ul>
Poultry	All stages		<ul style="list-style-type: none"><li>❖ <b>Provide shelter to the backyard/scavenging poultry.</b></li><li>❖ <b>Feed grains in the morning/evening to supplement scavenging.</b></li></ul>
Goat	All stages		<ul style="list-style-type: none"><li>❖ Deworming for gastrointestinal parasite</li></ul>
Cattle	All stages	FMD	<ul style="list-style-type: none"><li>❖ <b>Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</b></li><li>❖ Provide proper bedding materials especially to new-born and lukewarm food &amp; water</li><li>❖ Provide feed supplements</li></ul>

Advisory for district: Upper Dibang Valley

Anini: Latitude: 28.2179994/Longitude: 94.7277528/Altitude: 1968 masl

Weather summary of the previous week	Weather forecast valid up to 27 <sup>th</sup> May 2018
Rainfall = 1.0 mm (Anini) (up to 17 <sup>th</sup> April)	<b>Mostly cloudy with possibility of moderate to rather heavy rainfall.</b> Daily maximum and minimum temperature for the following period is predicted to be 26-27°C and 13-14°C respectively. Expected morning and evening relative humidity will be 98-99% and 69-84% respectively. Wind direction is mainly E & ESE with speed range of 3-4 kmph.
<b>Warning:</b>	• Nil

### GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

### DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
<b>FIELD CROPS</b>			
Rice	Transplantation / leaf elongation	Stem borer	<ul style="list-style-type: none"><li>• On anticipation of rain, provide proper drainage to the nursery/main field to avoid runoff</li><li>• Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</li><li>• Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It</li></ul>

			will reduce the carryover of the infestation to the main field.
Jhum rice	Leaf elongation		<ul style="list-style-type: none"> <li>• <b>On anticipation of rain, provide proper drainage</b></li> <li>• <b>Follow proper runoff management system to avoid loss of top soil due to heavy rainfall.</b></li> <li>• <b>Keep the surrounding clean/ weedfree to avoid disease/pest harboring</b></li> </ul>
Pea	Maturity	Powdery mildew/ leaf eating insects	<ul style="list-style-type: none"> <li>❖ <b>Green pods can be harvested during sunny days</b></li> <li>❖ Provide adequate drainage and avoid water stagnation near the base of the plants.</li> <li>❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.</li> </ul>
Toria/ Mustard	Harvesting	Aphids	<ul style="list-style-type: none"> <li>❖ <b>Harvest during clear/dry days</b></li> <li>❖ Provide adequate drainage</li> <li>❖ If the infestation is high, Spray Dimethoate 30EC @2ml/litre against aphids in Rapeseed/Mustard using sticker or during clear/dry days.</li> </ul>
<b>VEGETABLES</b>			
Cucurbits	Vegetative		❖ <b>Cover the base of crop with locally available mulches to avoid exposure to erosion,.</b>
Ginger/ Turmeric	Sowing/ germination		❖ <b>Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil &amp; conserve moisture during dry seasons.</b>
Potato	Maturity/ Harvesting		<ul style="list-style-type: none"> <li>❖ <b>Harvesting recommended during clear/dry days</b></li> <li>❖ Store already harvested potatoes in a cool, well ventilated place/ do not wash before storing as dampness promotes early spoilage.</li> </ul>
<b>HORTICULTURAL CROPS</b>			
Apple	Fruiting	Fruit drop	❖ <b>Spray 2,4,5-T @ 20ppm or 2,4,5-TCPA @ 15ppm to inhibit fruit drop</b>
Citrus	Flowering	Fruit drop/ Phytophthora	<ul style="list-style-type: none"> <li>• <b>Foliar application of micronutrient/multiplex @ 0.2% should be done to prevent flower drop</b></li> <li>• During clear dry days, apply Bordeaux paste on the tree trunk upto the height of 24 inches by brush.</li> <li>• During clear dry days or using stickers during rain, spraying and drenching with metalaxyl MZ-72 @ 2.75 g/lit water on the tree against Phytophthora.</li> <li>• Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.</li> </ul>
Peach	Fruit maturing	Fruit Fly	<ul style="list-style-type: none"> <li>❖ <b>Install fruit fly pheromone traps,</b></li> <li>❖ <b>Collect and dispose off the fallen fruits.</b></li> <li>❖ <b>Clean basin,</b></li> </ul>
Large cardamom	Sowing		❖ Sowing in primary nursery bed at 2cm depth & 10cm apart with mulching & regular irrigation.
Kiwi	Flowering		❖ <b>Kiwi fruit vine should be covered with 50% shade net to protect flowers from heavy rain and hail storm.</b>
<b>Honey Bees</b>			
Honey bees			<ul style="list-style-type: none"> <li>❖ Cover the boxes with locally available dry grass or straw to provide warmth</li> <li>❖ Provide sugar syrup in a bowl in front of the box in case of heavy rainfall</li> </ul>
<b>LIVESTOCKS</b>			
<b>Livestock</b>	<b>Stage</b>	<b>Disease</b>	<b>Precautionary Practices to be followed</b>
<ul style="list-style-type: none"> <li>❖ <b>General</b></li> <li>❖ <b>Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding</b></li> <li>❖ <b>Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,</b></li> </ul>			
Fishery			<ul style="list-style-type: none"> <li>❖ <b>To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.</b></li> <li>❖ <b>Broadcast mustard Oil Cake (MOC) @5kg/day over the</b></li> </ul>

			<b>pond twice daily to feed fish fingerlings.</b>
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	<ul style="list-style-type: none"> <li>❖ <b>Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds.</b></li> <li>❖ Avoid dampness and cover weak and sick animals with sack cloth.</li> <li>❖ The bedding is always dry and that there is plenty.</li> <li>❖ Animals should be given lukewarm feed and water.</li> <li>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</li> </ul>
Poultry	All stages		<ul style="list-style-type: none"> <li>❖ <b>Provide shelter to the backyard/scavenging poultry. Feed grains in the morning/evening to supplement scavenging.</b></li> <li>❖ <b>Inclusion of turmeric powder @ 10g/kg feed for prevention of coccidiosis.</b></li> </ul>
Cattle	All stages	FMD	<ul style="list-style-type: none"> <li>❖ <b>Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</b></li> <li>❖ Supportive treatment of infected animals under supervision of veterinary department officials,</li> <li>❖ Avoid mixing of infected and healthy animals,</li> <li>❖ Keep infected animals separated from the healthy ones,</li> <li>❖ Vaccinate the healthy animals against FMD (Through State Veterinary Dept.)</li> <li>❖ Provide feed supplements</li> </ul>
Mithun		FMD	<ul style="list-style-type: none"> <li>❖ Polyvalent FMD vaccine with serotype O, A and Asia at 6 months of age and repeat after that 6 months interval by sub-cutaneous route.</li> <li>❖ Pregnant animals above 7 months of pregnancy should be avoided.</li> </ul>

(Integrated Agro-Meteorological Advisory Services)

AMFU, ICAR Research Complex for NEH Region  
Arunachal Pradesh Centre, Basar-791101

**Advisory for district: East Kameng**

Weather summary of the previous week	Weather forecast valid up to 27 <sup>th</sup> May 2018
Rainfall = 5.3 mm (up to 17 <sup>th</sup> April)	<b>Mostly cloudy with possibility moderate to rather heavy rain.</b> Daily maximum and minimum temperature for the following period is predicted to be 30-32°C and 17-19°C respectively. Expected morning and evening relative humidity will be 92-98% and 57-79% respectively. Expected wind direction is mainly SE & ESE with speed range of 2-3 kmph.
<b>Warning:</b>	•

### GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

### DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
<b>FIELD CROPS</b>			
Jhum rice	Leaf elongation		<ul style="list-style-type: none"> <li>• On anticipation of rain, provide proper drainage</li> <li>• Follow proper runoff management system to avoid loss of top soil due to heavy rainfall.</li> <li>• Keep the surrounding clean/ weedfree to avoid disease/pest harboring</li> </ul>
Maize	Pod formation	Soybean looper	<ul style="list-style-type: none"> <li>❖ Provide proper drainage</li> <li>❖ Spray Azadirachtin 0.15% EC 2@ 6ml/lit</li> <li>❖ Monitor the crop against attack of insect pests,</li> </ul>

Rice	Nursery/trans plantation	Stem borer	<ul style="list-style-type: none"> <li>• <b>Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</b></li> <li>• <b>Wet seed treatment for 12hrs. in Carbendazim 50% WP (1g/litre of water) &amp; Chlorpyrifos 20% EC (2ml in 10 litres of water) solution before sowing.</b></li> <li>• Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field.</li> <li>• Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.</li> </ul>
Pea	Pod mature	Birds	<ul style="list-style-type: none"> <li>❖ <b>Avoid water stagnation near base of the plants</b></li> <li>❖ <b>Harvest of green pods,</b></li> <li>❖ <b>Use of scare crow and tying of bird scare tape around the crop field,</b></li> </ul>
❖ <b>VEGETABLES</b>			
Cucurbits	Vegetative		❖ <b>Cover the base of crop with locally available mulches to avoid exposure to erosion,.</b>
Summer vegetables	Sowing/vegetative	Flea beetles/ fungal diseases	<ul style="list-style-type: none"> <li>❖ During clear/dry days, spray azadirachtin <u>0.15EC@6ml/lit</u> against flea beetles</li> <li>❖ During clear/dry days, spray carbandazim/Mancozab@2gm/lit to control fungal diseases in summer vegetables.</li> </ul>
Ginger/ Turmeric	Sowing/germination		❖ <b>Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil &amp; conserve moisture during dry seasons.</b>
Potato	Maturity/harvesting		❖ <b>Harvest only during clear/dry days</b>
<b>HORTICULTURAL CROPS</b>			
Citrus	Flowering	Bark eating caterpillar	<ul style="list-style-type: none"> <li>• Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.</li> </ul>
Banana	Bunching	Cold	<ul style="list-style-type: none"> <li>❖ Cover newly emerged bunches with locally available sack to protect from cold/frost</li> <li>❖ <b>Mulching with straw/crop residue at root zone to avoid frost injury in banana.</b></li> </ul>
Large Cardamom	Vegetative/flowering stage		❖ Provide proper drainage to avoid water stagnation in the base of the plants.
<b>LIVESTOCKS</b>			
<b>Livestock</b>	<b>Stage</b>	<b>Disease</b>	❖ <b>Precautionary Practices to be followed</b>
❖ <b>General</b> ❖ <b>Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding</b> ❖ <b>Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,</b>			
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	<ul style="list-style-type: none"> <li>❖ <b>Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds.</b></li> <li>❖ Avoid dampness and cover weak and sick animals with sack cloth.</li> <li>❖ The bedding is always dry and that there is plenty.</li> <li>❖ Animals should be given lukewarm feed and water.</li> <li>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</li> </ul>
Pigs	All stages		<ul style="list-style-type: none"> <li>❖ <b>Avoid dampness and cover weak and sick animals with sack cloth.</b></li> <li>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</li> </ul>
Goat	All stages		❖ Deworming for gastrointestinal parasite
Fishery			❖ <b>To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.</b>

			<div>❖ Broadcast mustard Oil Cake (MOC) @5kg/day over the pond twice daily to feed fish fingerlings.</div>
Cattle	All stages	FMD	<div>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</div> <div>❖ Provide proper bedding materials especially to new-born and lukewarm food &amp; water</div> <div>❖ Provide feed supplements</div>

## Agro-met Advisory Bulletin

(Period: 23<sup>rd</sup> to 25<sup>th</sup> May, 2018)

No: AMFU-Basar/2018/41

Dated: Tue, 22<sup>nd</sup> May, 2018

ग्रामीण कृषि मौसम सेवा

GRAMIN KRISHI MAUSAM SEWA  
(Integrated Agro-Meteorological Advisory Services)

AMFU, ICAR Research Complex for NEH Region  
Arunachal Pradesh Centre, Basar-791101

Advisory for district: East Siang

Pasighat: Latitude: 28.0700/Longitude: 95.3300/Altitude: 153 masl

Weather summary of the previous week	Weather forecast valid up to 27 <sup>th</sup> May 2018
Rainfall: 104.8 mm; T. Max: 32.0°C; T. Min: 18.0°C ; RH: 54-100% (up to 17 <sup>th</sup> April)	Mostly cloudy with possibility of moderate to rather heavy rainfall. Daily maximum and minimum temperature for the following period is predicted to be 31-34°C and 21-23°C respectively. Expected morning and evening relative humidity will be 93-99% and 70-93% respectively. Expected wind direction is mainly ESE & NE with speed range of 2 kmph.
Warning:	• Nil

### Weather Based Agro-meteorological Advisories Bulletin

GENERAL RECOMMENDATIONS			
<ul style="list-style-type: none"><li>Obtain seeds from reputed/certified/reliable source</li><li>Use fertilizers/pesticides as per recommended doses for the location</li><li>Preference must be given on use of organic manures/bio-fertilizers &amp; bio-pesticides</li><li>Warning: Spraying of DDT in crops is lethal</li></ul>			
Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Rice	Leaf Elongation/ Tillering	Stem borer	<ul style="list-style-type: none"><li>Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</li><li>Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field.</li></ul>

Jhum rice	Rooting/ Leaf elongation		<ul style="list-style-type: none"> <li>• <b>Provide proper drainage and soil conservation measures like mulching with locally available materials.</b></li> <li>• <b>Keep the periphery clean</b></li> <li>• <b>Avoid application of fertilizer and insecticides/pesticides</b></li> </ul>
Maize	Pod formation	Soybean looper	<ul style="list-style-type: none"> <li>❖ <b>Provide proper drainage</b></li> <li>❖ <b>Spray Azadirachtin 0.15% EC 2@ 6ml/lit</b></li> <li>❖ <b>Monitor the crop against attack of insect pests,</b></li> </ul>

## Agro-met Advisory Bulletin

(Period: 23<sup>rd</sup> to 25<sup>th</sup> May, 2018)

No: AMFU-Basar/2018/41

Dated: Tue, 22<sup>nd</sup> May, 2018

ग्रामीण कृषि मौसम सेवा

GRAMIN KRISHI MAUSAM SEWA  
(Integrated Agro-Meteorological Advisory Services)

AMFU, ICAR Research Complex for NEH Region  
Arunachal Pradesh Centre, Basar-791101

Advisory for district: Kurung Kumey

Koloriang: Latitude: 27.9167°/Longitude: 93.3500°/Altitude: 1040 masl

Weather summary of the previous week	Weather forecast valid up to 27 <sup>th</sup> May 2018
Past weather summary not available	<b>Mostly cloudy with possibility of moderate to rather heavy rain.</b> Daily maximum and minimum temperature for the following period is predicted to be 25-26°C and 12-13°C respectively. Expected morning and evening relative humidity will be 88-96% and 64-79% respectively. Wind direction is mainly SE & SSE with wind speed range of 3-5 kmph.
Warning	• Nil

### GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

### DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
<b>FIELD CROPS</b>			
Rice	Transplantation / leaf elongation	Stem borer	<ul style="list-style-type: none"><li>• On anticipation of rain, provide proper drainage to the nursery/main field to avoid runoff</li><li>• Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</li><li>• Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.</li></ul>

Jhum rice	Leaf elongation		<ul style="list-style-type: none"> <li>• <b>On anticipation of rain, provide proper drainage</b></li> <li>• <b>Follow proper runoff management system to avoid loss of top soil due to heavy rainfall.</b></li> <li>• <b>Keep the surrounding clean/ weedfree to avoid disease/pest harboring</b></li> </ul>
Pea	Maturity	Powdery mildew/ leaf eating insects	<ul style="list-style-type: none"> <li>❖ <b>Green pods can be harvested during sunny days</b></li> <li>❖ Provide adequate drainage and avoid water stagnation near the base of the plants.</li> <li>❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.</li> </ul>
Toria/ Mustard	Harvesting	Aphids	<ul style="list-style-type: none"> <li>❖ <b>Harvest during clear/dry days</b></li> <li>❖ Provide adequate drainage</li> <li>❖ If the infestation is high, Spray Dimethoate 30EC @2ml/litre against aphids in Rapeseed/Mustard using sticker or during clear/dry days.</li> </ul>
<b>VEGETABLES</b>			
Cucurbits	Vegetative		❖ <b>Cover the base of crop with locally available mulches to avoid exposure to erosion,.</b>
Ginger/ Turmeric	Sowing/ germination		❖ <b>Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil &amp; conserve moisture during dry seasons.</b>
Summer vegetables	Sowing		❖ <b>Sowing advocated during clear/dry days</b>
Cabbage/ Cauliflower	Harvesting		<ul style="list-style-type: none"> <li>❖ <b>Harvest mature crop.</b></li> <li>❖ <b>Constantly monitor against attack of insects pests/mole.</b></li> </ul>
<b>HORTICULTURAL CROPS</b>			
Citrus	Flowering	Fruit drop/ Phytophthora	<ul style="list-style-type: none"> <li>• <b>Foliar application of micronutrient/multiplex @ 0.2% should be done to prevent flower drop</b></li> <li>• During clear dry days, apply Bordeaux paste on the tree trunk upto the height of 24 inches by brush.</li> <li>• During clear dry days or using stickers during rain, spraying and drenching with metalaxyl MZ-72 @ 2.75 g/lit water on the tree against Phytophthora.</li> <li>• Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.</li> </ul>
Apple	Fruiting	Fruit drop	❖ <b>Spray 2,4,5-T @ 20ppm or 2,4,5-TCPA @ 15ppm to inhibit fruit drop</b>
Peach	Fruit maturing	Fruit Fly	<ul style="list-style-type: none"> <li>❖ <b>Install fruit fly pheromone traps,</b></li> <li>❖ <b>Collect and dispose off the fallen fruits.</b></li> <li>❖ <b>Clean basin,</b></li> </ul>
Large cardamom	Sowing		❖ Sowing in primary nursery bed at 2cm depth & 10cm apart with mulching & regular irrigation.
Temperate fruits	After harvesting		<ul style="list-style-type: none"> <li>❖ Training &amp; pruning of the temperate crops (apple/pears/peach) is recommended</li> <li>❖ <b>In case of flowering, stop spraying insecticides/pesticides</b></li> </ul>
Pineapple	Harvesting		❖ <b>After winter harvest, collection/Selection of suckers &amp; slip to be done for next season planting</b>
Kiwi	Flowering		❖ <b>Kiwi fruit vine should be covered with 50% shade net to protect flowers from heavy rain and hail storm.</b>
Banana	Bunching	Cold	<ul style="list-style-type: none"> <li>❖ Cover newly emerged bunches with locally available sack to protect from cold/frost</li> <li>❖ <b>Mulching with straw/crop residue at root zone to avoid frost injury in banana.</b></li> </ul>
<b>Honey Bees</b>			
			❖ Box must be covered with straw/dry leaves to provide warmth
<b>LIVESTOCKS</b>			
<b>General</b> <ul style="list-style-type: none"> <li>❖ Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding</li> <li>❖ Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly</li> </ul>			

cleaned,			
Livestock	Stage	Disease	Precautionary Practices to be followed
Fishery			<ul style="list-style-type: none"> <li>❖ To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.</li> <li>❖ Broadcast mustard Oil Cake (MOC) @5kg/day over the pond twice daily to feed fish fingerlings.</li> </ul>
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	<ul style="list-style-type: none"> <li>❖ Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds.</li> <li>❖ Avoid dampness and cover weak and sick animals with sack cloth.</li> <li>❖ The bedding is always dry and that there is plenty.</li> <li>❖ Animals should be given lukewarm feed and water.</li> <li>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</li> </ul>
Cattle	All stages	FMD	<ul style="list-style-type: none"> <li>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</li> <li>❖ Provide proper bedding materials especially to new-born and lukewarm food &amp; water</li> <li>❖ Provide feed supplements</li> </ul>
Poultry	All stages		<ul style="list-style-type: none"> <li>❖ Provide shelter to the backyard/scavenging poultry. Feed grains in the morning/evening to supplement scavenging.</li> </ul>
Mithun		FMD	<ul style="list-style-type: none"> <li>❖ Polyvalent FMD vaccine with serotype O, A and Asia at 6 months of age and repeat after that 6 months interval by sub-cutaneous route.</li> <li>❖ Pregnant animals above 7 months of pregnancy should be avoided.</li> </ul>

### Advisory for district: Lohit

Weather summary of the previous week	Weather forecast valid up to 23 <sup>rd</sup> May 2018
Rainfall = 42.4 mm (up to 17 <sup>th</sup> April)	<b>Mostly cloudy with possibility of rather heavy to heavy rainfall.</b> Daily maximum and minimum temperature for the following period is predicted to be 30-33°C and 19-20°C respectively. Expected morning and evening relative humidity will be 94-98% and 57-81% respectively. Wind direction is mainly ENE & E with speed range of 3-4 kmph.
<b>Warning:</b>	<ul style="list-style-type: none"><li><b>Nil</b></li></ul>

#### GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

#### DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
<b>FIELD CROPS</b>			
Rice	Leaf Elongation/ Tillering	Stem borer	<ul style="list-style-type: none"><li><b>Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</b></li><li>Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field.</li></ul>
Jhum rice	Rooting/ Leaf elongation		<ul style="list-style-type: none"><li><b>Provide proper drainage and soil conservation measures like mulching with locally available materials.</b></li><li><b>Keep the periphery clean</b></li><li><b>Avoid application of fertilizer and insecticides/pesticides</b></li></ul>

Maize	Pod formation	Soybean looper	❖ <b>Provide proper drainage</b> ❖ <b>Spray Azadirachtin 0.15% EC 2@ 6ml/lit</b> ❖ <b>Monitor the crop against attack of insect pests,</b>
Pea	Seed development	Powdery mildew/ leaf eating insects	❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.
<b>VEGETABLES</b>			
Summer vegetables	Sowing/ vegetative	Flea beetles/ fungal diseases	❖ During clear/dry days, spray azadirachtin <b>0.15EC@6ml/lit</b> against flea beetles ❖ During clear/dry days, spray carbandazim/Mancozab@2gm/lit to control fungal diseases in summer vegetables.
Cucurbits	Vegetative		❖ <b>Cover the base of crop with locally available mulches to avoid exposure to erosion,.</b>
Ginger/ Turmeric	Sowing/ germination		❖ <b>Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil &amp; conserve moisture during dry seasons.</b>
French Bean	Sowing		❖ <b>Sowing of quality seeds advocated</b>
Okra	Sowing		❖ <b>Proper drainage to already sown crops</b> ❖ <b>Avoid fresh sowing</b>
<b>HORTICULTURAL CROPS</b>			
Guava	Flowering		❖ <b>Avoid water logging in the basin,</b> ❖ <b>Basin cleaning in half moon system is advised,</b>
Citrus	Flowering	Phytophthora	<ul style="list-style-type: none"> <li><b>During clear dry days, apply Bordeaux paste on the tree trunk upto the height of 24 inches by brush.</b></li> <li><b>During clear dry days or using stickers during rain, spraying and drenching with metalaxyl MZ-72 @ 2.75 g/lit water on the tree against Phytophthora.</b></li> <li>Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.</li> </ul>
Banana	Bunching		❖ Denavelling (removal of male bud) & bagging of bunches advocated..
Kiwi	Pruning/Training		❖ <b>Diseased and senile branches should be removed.</b> ❖ <b>Pruning should be done retaining 8-10 buds per branch for enhancing new flush and flowering.</b> ❖ <b>Pruned healthy hard wood of pencil thickness size having 4-5 buds can be used as cutting for propagation</b>
Large Cardamom	Fruiting	Chirkey Disease	❖ <b>Remove dry/diseased/old tillers &amp; branches &amp; spray Bio NPK@ 2ml/lit water for proper growth on clear/dry days.</b>
<b>Honey Bees</b>			
Honey bees			❖ Cover the boxes with locally available dry grass or straw to provide warmth
<b>LIVESTOCKS</b>			
<b>Livestock</b>	<b>Stage</b>	<b>Disease</b>	<b>Precautionary Practices to be followed</b>
❖ <b>General</b> ❖ <b>Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding</b> ❖ <b>Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,</b>			
Fishery			❖ <b>To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.</b> ❖ <b>Broadcast mustard Oil Cake (MOC) @5kg/day over the pond twice daily to feed fish fingerlings.</b>
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	❖ <b>Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds.</b> ❖ Avoid dampness and cover weak and sick animals with sack cloth. ❖ The bedding is always dry and that there is plenty.

			<ul style="list-style-type: none"><li>❖ Animals should be given lukewarm feed and water.</li><li>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</li></ul>
Poultry	All stages		<ul style="list-style-type: none"><li>❖ <b>Provide shelter to the backyard/scavenging poultry. Feed grains in the morning/evening to supplement scavenging.</b></li><li>❖ Day old chick-Maintain warmth by lighting,</li><li>❖ <b>Inclusion of turmeric powder @ 10g/kg feed for prevention of coccidiosis.</b></li></ul>
Goat	All stages		<ul style="list-style-type: none"><li>❖ Deworming for gastrointestinal parasite</li></ul>
Cattle	All stages	FMD	<ul style="list-style-type: none"><li>❖ <b>Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</b></li><li>❖ Provide proper bedding materials especially to new-born and lukewarm food &amp; water</li><li>❖ Provide feed supplements</li></ul>

Okra	Vegetative		❖ Provide proper drainage
<b>HORTICULTURAL CROPS</b>			
Citrus	Flowering	Phytophthora	<ul style="list-style-type: none"> <li>During clear dry days, apply Bordeaux paste on the tree trunk upto the height of 24 inches by brush.</li> <li>During clear dry days or using stickers during rain, spraying and drenching with metalaxyl MZ-72 @ 2.75 g/lit water on the tree against Phytophthora.</li> <li>Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.</li> </ul>
Guava	Flowering		❖ Avoid water logging in the basin, ❖ Basin cleaning in half moon system is advised,
Banana	Bunching		❖ Denavelling (removal of male bud) & bagging of bunches advocated..
Large cardamom	Sowing		❖ Sowing in primary nursery bed at 2cm depth & 10cm apart with mulching & regular irrigation. ❖ Applications of well decomposed cattle manure/compost @5kg/plant during clear/dry days.
<b>Honey Bees</b>			
Honey bees			❖ Box must be covered with straw/dry leaves to provide warmth
<b>LIVESTOCKS</b>			
<b>Livestock</b>	<b>Stage</b>	<b>Disease</b>	❖ Precautionary Practices to be followed
❖ General ❖ Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding ❖ Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,			
Fishery			❖ To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond. ❖ Broadcast mustard Oil Cake (MOC) @5kg/day over the pond twice daily to feed fish fingerlings.
Pigs	All stages	FMD (high fever and appearance	❖ Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials

		of mucous membrane of the mouth and foot.) Swine Fever	<p><b>together is advocated to improve digestibility and to break- down toxins from some feeds.</b></p> <ul style="list-style-type: none"> <li>❖ Avoid dampness and cover weak and sick animals with sack cloth.</li> <li>❖ The bedding is always dry and that there is plenty.</li> <li>❖ Animals should be given lukewarm feed and water.</li> <li>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</li> </ul>
Poultry	All stages		<ul style="list-style-type: none"> <li>❖ <b>Provide shelter to the backyard/scavenging poultry. Feed grains in the morning/evening to supplement scavenging.</b></li> <li>❖ Day old chick-Maintain warmth by lighting,</li> <li>❖ <b>Inclusion of turmeric powder @ 10g/kg feed for prevention of coccidiosis.</b></li> </ul>
Goat	All stages		<ul style="list-style-type: none"> <li>❖ Deworming for gastrointestinal parasite</li> </ul>
Cattle	All stages	FMD	<ul style="list-style-type: none"> <li>❖ <b>Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</b></li> <li>❖ Provide proper bedding materials especially to new-born and lukewarm food &amp; water</li> <li>❖ Provide feed supplements</li> </ul>

## Agro-met Advisory Bulletin

(Period: 23<sup>rd</sup> to 25<sup>th</sup> May, 2018)

No: AMFU-Basar/2018/41

Dated: Tue, 22<sup>nd</sup> May, 2018

ग्रामीण कृषि मौसम सेवा

GRAMIN KRISHI MAUSAM SEWA  
(Integrated Agro-Meteorological Advisory Services)

AMFU, ICAR Research Complex for NEH Region  
Arunachal Pradesh Centre, Basar-791101

Advisory for district: Lower Subansiri

Weather summary of the previous week	Weather forecast valid up to 27 <sup>th</sup> May 2018
Rainfall = NA	Mostly cloudy with possibility of rather heavy to heavy rainfall. Daily maximum and minimum temperature for the following period is predicted to be 30-32°C and 19-20°C respectively. Expected morning and evening relative humidity will be 93-99% and 62-77% respectively. Wind direction is mainly variable with speed range of 2 kmph.
Warning:	• Nil

### GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

### DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Rice	Transplantation / leaf elongation	Stem borer	<ul style="list-style-type: none"><li>• On anticipation of rain, provide proper drainage to the nursery/main field to avoid runoff</li><li>• Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</li><li>• Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It</li></ul>

			will reduce the carryover of the infestation to the main field.
Jhum rice	Leaf elongation		<ul style="list-style-type: none"> <li>• <b>On anticipation of rain, provide proper drainage</b></li> <li>• <b>Follow proper runoff management system to avoid loss of top soil due to heavy rainfall.</b></li> <li>• <b>Keep the surrounding clean/ weedfree to avoid disease/pest harboring</b></li> </ul>
Pea	Maturity	Powdery mildew/ leaf eating insects	<ul style="list-style-type: none"> <li>❖ <b>Green pods can be harvested during sunny days</b></li> <li>❖ Provide adequate drainage and avoid water stagnation near the base of the plants.</li> <li>❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.</li> </ul>
Toria/ Mustard	Harvesting	Aphids	<ul style="list-style-type: none"> <li>❖ <b>Harvest during clear/dry days</b></li> <li>❖ Provide adequate drainage</li> <li>❖ If the infestation is high, Spray Dimethoate 30EC @2ml/litre against aphids in Rapeseed/Mustard using sticker or during clear/dry days.</li> </ul>
<b>VEGETABLES</b>			
Cucurbits	Vegetative		❖ <b>Cover the base of crop with locally available mulches to avoid exposure to erosion,.</b>
Ginger/ Turmeric	Sowing/ germination		❖ <b>Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil &amp; conserve moisture during dry seasons.</b>
Pre-summer vegetables	Sowing	Nursery insects	<ul style="list-style-type: none"> <li>• Right time for transplanting the ready seedlings of chili, tomato, capsicum etc.</li> <li>• Provide proper drainage to newly transplanted seedlings and follow raised bed for sowing</li> <li>• Spray Azadirachtin 1% (10000 PPM) @ 1000-1500 ml in 500 litres water/ha against nursery insects</li> </ul>
<b>HORTICULTURAL CROPS</b>			
Apple	Fruiting	Fruit drop	❖ <b>Spray 2,4,5-T @ 20ppm or 2,4,5-TCPA @ 15ppm to inhibit fruit drop</b>
Citrus	Flowering	Fruit drop/ Phytophthora	<ul style="list-style-type: none"> <li>• <b>Foliar application of micronutrient/multiplex @ 0.2% should be done to prevent flower drop</b></li> <li>• During clear dry days, apply Bordeaux paste on the tree trunk upto the height of 24 inches by brush.</li> <li>• During clear dry days or using stickers during rain, spraying and drenching with metalaxyl MZ-72 @ 2.75 g/lit water on the tree against Phytophthora.</li> <li>• Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.</li> </ul>
Peach	Fruit maturing	Fruit Fly	<ul style="list-style-type: none"> <li>❖ <b>Install fruit fly pheromone traps,</b></li> <li>❖ <b>Collect and dispose off the fallen fruits.</b></li> <li>❖ <b>Clean basin,</b></li> </ul>
Guava	Flowering		<ul style="list-style-type: none"> <li>❖ <b>Avoid water logging in the basin,</b></li> <li>❖ <b>Basin cleaning in half moon system is advised,</b></li> </ul>
Large cardamom	Sowing		<ul style="list-style-type: none"> <li>❖ Sowing in primary nursery bed at 2cm depth &amp; 10cm apart with mulching &amp; regular irrigation.</li> <li>❖ <b>Applications of well decomposed cattle manure/compost @5kg/plant during clear/dry days.</b></li> </ul>
Kiwi	Flowering		❖ <b>Kiwi fruit vine should be covered with 50% shade net to protect flowers from heavy rain and hail storm.</b>
Temperate fruits	After harvesting		<ul style="list-style-type: none"> <li>❖ Training &amp; pruning of the temperate crops (apple/pears/peach) is recommended</li> <li>❖ <b>In case of flowering, stop spraying insecticides/pesticides</b></li> </ul>
<b>Agroforestry</b>			
Toko palm	Nursery		❖ Filling of nursery polybags for raising of takopalm seedlings
<b>Honey Bees</b>			

Honey bees			❖ Box must be covered with straw/dry leaves to provide warmth
<b>LIVESTOCKS</b>			
<b>Livestock</b>	<b>Stage</b>	<b>Disease</b>	❖ <b>Precautionary Practices to be followed</b>
❖ <b>General</b> ❖ Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding ❖ Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,			
Fishery			❖ <b>To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.</b> ❖ Broadcast mustard Oil Cake (MOC) @5kg/day over the pond twice daily to feed fish fingerlings.
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	❖ <b>Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds.</b> ❖ Avoid dampness and cover weak and sick animals with sack cloth. ❖ The bedding is always dry and that there is plenty. ❖ Animals should be given lukewarm feed and water. ❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	❖ <b>Avoid dampness and cover weak and sick animals with sack cloth.</b> ❖ <b>The bedding is always dry and that there is plenty.</b> ❖ <b>If possible wooden sleeping box should be provided.</b> ❖ Animals should be given lukewarm feed and water. ❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.
Cattle	All stages	FMD	❖ <b>Animals should be given lukewarm feed and water.</b> ❖ <b>Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</b> ❖ Provide proper bedding materials especially to new-born and lukewarm food & water ❖ Provide feed supplements
Mithun		FMD	❖ Polyvalent FMD vaccine with serotype O, A and Asia at 6 months of age and repeat after that 6 months interval by sub-cutaneous route. ❖ Pregnant animals above 7 months of pregnancy should be avoided.

**Advisory for district: Papum Pare**

Weather summary of the previous week	Weather forecast valid up to 27 <sup>th</sup> May 2018
Rainfall: 43.9 mm; T. Max: 34.0°C; T. Min: 18.0°C ; RH: 64-88% (up to 17 <sup>th</sup> April)	<b>Mostly cloudy with possibility of moderate to rather heavy rain.</b> Daily maximum and minimum temperature for the following period is predicted to be 31-35°C and 21-22°C respectively. Expected morning and evening relative humidity will be 92-99% and 63-96% respectively. Expected wind direction mainly variable with speed range of 2-3 kmph.
<b>Warning:</b>	•

### GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

### DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
<b>FIELD CROPS</b>			
Rice	Leaf Elongation/ Tillering	Stem borer	<ul style="list-style-type: none"><li>• <b>Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</b></li><li>• Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field.</li></ul>
Maize	Pod formation	Soybean looper	<ul style="list-style-type: none"><li>❖ <b>Provide proper drainage</b></li><li>❖ <b>Spray Azadirachtin 0.15% EC 2@ 6ml/lit</b></li><li>❖ <b>Monitor the crop against attack of insect pests,</b></li></ul>

Jhum rice	Rooting/ Leaf elongation		<ul style="list-style-type: none"> <li>• <b>Provide proper drainage and soil conservation measures like mulching with locally available materials.</b></li> <li>• <b>Keep the periphery clean</b></li> <li>• <b>Avoid application of fertilizer and insecticides/pesticides</b></li> </ul>
<b>VEGETABLES</b>			
Cucurbits	Vegetative		❖ <b>Cover the base of crop with locally available mulches to avoid exposure to erosion,.</b>
Summer vegetables	Sowing/ vegetative	Flea beetles/ fungal diseases	❖ During clear/dry days, spray azadirachtin <a href="#">0.15EC@6ml/lit</a> against flea beetles ❖ During clear/dry days, spray carbandazim/Mancozab@2gm/lit to control fungal diseases in summer vegetables.
French Bean	vegetative		❖ Proper drainage should be provided ❖
Ginger/ Turmeric	Sowing/ germination		❖ <b>Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil &amp; conserve moisture during dry seasons.</b>
<b>HORTICULTURAL CROPS</b>			
Citrus	Flowering	Phytophthora	<ul style="list-style-type: none"> <li>• <b>During clear dry days, apply Bordeaux paste on the tree trunk upto the height of 24 inches by brush.</b></li> <li>• <b>During clear dry days or using stickers during rain, spraying and drenching with metalaxyl MZ-72 @ 2.75 g/lit water on the tree against Phytophthora.</b></li> <li>• Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.</li> </ul>
Guava	Flowering		❖ <b>Avoid water logging in the basin,</b> ❖ <b>Basin cleaning in half moon system is advised,</b>
Banana	Bunching		❖ Denavelling (removal of male bud) & bagging of bunches advocated..

Advisory for district: Tawang

Weather summary of the previous week	Weather forecast valid up to 27 <sup>th</sup> May 2018
Rainfall = 7.6 mm (up to 17 <sup>th</sup> April)	Mostly cloudy with possibility of light to rather heavy rainfall. Daily maximum and minimum temperature for the following period is predicted to be 17-19°C and 6.0-7.0°C respectively. Expected morning and evening relative humidity will be 81-89% and 57-72% respectively. Wind direction is mainly NW & NNW with probable speed range of 2-5 kmph.
Warning:	•

### GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

### DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Jhum rice	Leaf elongation		<ul style="list-style-type: none"><li>• On anticipation of rain, provide proper drainage</li><li>• Follow proper runoff management system to avoid loss of top soil due to heavy rainfall.</li><li>• Keep the surrounding clean/ weedfree to avoid disease/pest harboring</li></ul>
Maize	Vegetative		<ul style="list-style-type: none"><li>• Monitor against insect pest attack</li></ul>

Rice	Transplantation / leaf elongation	Stem borer	<ul style="list-style-type: none"> <li>• <b>On anticipation of rain, provide proper drainage to the nursery/main field to avoid runoff</b></li> <li>• <b>Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</b></li> <li>• Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.</li> </ul>
Jhum field	Sowing		<ul style="list-style-type: none"> <li>• Adopt sowing of leguminous crops like cowpea, frenchbean, soybean etc at 2-3 rows across the slope of jhum field at desirable intervals or ratios with rice to prevent soil erosion and conserve moisture and fertility.</li> <li>• Cowpea variety (Kashi Kanchan) and Frenchbean variety (Selection-9) are advocated for intercropping as they are short duration, dwarf and high yielding.</li> <li>• Carry out seed dressing/treatment with Thiram or Carbendazim @ 2g/kg seed before sowing</li> </ul>
<b>VEGETABLES</b>			
Ginger/ Turmeric	Sowing/ germination		❖ <b>Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil &amp; conserve moisture during dry seasons.</b>
French bean	Vegetative		❖ <b>Avoid water stagnation near the base of plant by providing proper drainage</b>
<b>HORTICULTURAL CROPS</b>			
Apple	Fruiting	Fruit drop	❖ <b>Spray 2,4,5-T @ 20ppm or 2,4,5-TCPA @ 15ppm to inhibit fruit drop</b>
Peach	Fruit maturing	Fruit Fly	❖ <b>Install fruit fly pheromone traps,</b> ❖ <b>Collect and dispose off the fallen fruits.</b> ❖ <b>Clean basin,</b>
Kiwi	Flowering		❖ <b>Kiwi fruit vine should be covered with 50% shade net to protect flowers from heavy rain and hail storm.</b>
Temperate fruits	After harvesting		❖ Training & pruning of the temperate crops (apple/pears/peach) is recommended ❖ <b>In case of flowering, stop spraying insecticides/pesticides</b>
Banana	Bunching	Cold	❖ Cover newly emerged bunches with locally available sack to protect from cold/frost ❖ <b>Mulching with straw/crop residue at root zone to avoid frost injury in banana.</b>
<b>LIVESTOCKS</b>			
<b>Livestock</b>	<b>Stage</b>	<b>Disease</b>	❖ <b>Precautionary Practices to be followed</b>
<b>General</b> ❖ Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding ❖ Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly cleaned,			
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	❖ <b>Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials together is advocated to improve digestibility and to break- down toxins from some feeds.</b> ❖ Avoid dampness and cover weak and sick animals with sack cloth. ❖ The bedding is always dry and that there is plenty. ❖ Animals should be given lukewarm feed and water. ❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.
Poultry	All stages		❖ <b>Provide shelter to the backyard/scavenging poultry. Feed grains in the morning/evening to supplement scavenging.</b> ❖ <b>Inclusion of turmeric powder @ 10g/kg feed for prevention of coccidiosis.</b>
Yak	All stages		❖ <b>Feeding of concentrate feed along with mineral mixture and salt.</b> ❖ <b>Hay feeding is recommended.</b>
Cattle	All stages	FMD	❖ <b>Animals should be given lukewarm feed and water.</b> ❖ <b>Right time to deworm with anti helmetic drugs</b>

			<p><b>(particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</b></p> <ul style="list-style-type: none"><li>❖ Provide proper bedding materials especially to new-born and lukewarm food &amp; water</li><li>❖ Provide feed supplements</li></ul>

## Agro-met Advisory Bulletin

(Period: 23<sup>rd</sup> to 25<sup>th</sup> May, 2018)

No: AMFU-Basar/2018/41

Dated: Tue, 22<sup>nd</sup> May, 2018

ग्रामीण कृषि मौसम सेवा

GRAMIN KRISHI MAUSAM SEWA  
(Integrated Agro-Meteorological Advisory Services)

AMFU, ICAR Research Complex for NEH Region  
Arunachal Pradesh Centre, Basar-791101

Advisory for district: Upper Siang

Weather summary of the previous week	Weather forecast valid up to 27 <sup>th</sup> May 2018
Rainfall = 33.4 mm (up to 17 <sup>th</sup> April)	Mostly cloudy with possibility of moderate to rather heavy rainfall. Daily maximum and minimum temperature for the following period is predicted to be 27-29°C and 15-16°C respectively. Expected morning and evening relative humidity will be 90-97% and 68-78% respectively. Wind direction is mainly ESE & E with speed range of 2-5 kmph.
Warning:	• Nil

### GENERAL RECOMMENDATIONS

- Obtain seeds from reputed/certified/reliable source
- Use fertilizers/pesticides as per recommended doses for the location
- Preference must be given on use of organic manures/bio-fertilizers & bio-pesticides
- Warning: Spraying of DDT in crops is lethal

### DETAILS OF ADVISORIES FOR THE PERIOD

Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Rice	Transplantation / leaf elongation	Stem borer	<ul style="list-style-type: none"><li>• On anticipation of rain, provide proper drainage to the nursery/main field to avoid runoff</li><li>• Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</li><li>• Cut the tips of the leaves before transplanting reduces the population of stem borer as the eggs are laid on that site. It will reduce the carryover of the infestation to the main field.</li></ul>
Jhum rice	Leaf elongation		<ul style="list-style-type: none"><li>• On anticipation of rain, provide proper drainage</li></ul>

			<ul style="list-style-type: none"> <li>• <b>Follow proper runoff management system to avoid loss of top soil due to heavy rainfall.</b></li> <li>• <b>Keep the surrounding clean/ weedfree to avoid disease/pest harboring</b></li> </ul>
Pea	Maturity	Powdery mildew/ leaf eating insects	<ul style="list-style-type: none"> <li>❖ <b>Green pods can be harvested during sunny days</b></li> <li>❖ Provide adequate drainage and avoid water stagnation near the base of the plants.</li> <li>❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.</li> </ul>
Toria/ Mustard	Harvesting	Aphids	<ul style="list-style-type: none"> <li>❖ <b>Harvest during clear/dry days</b></li> <li>❖ Provide adequate drainage</li> <li>❖ If the infestation is high, Spray Dimethoate 30EC @2ml/litre against aphids in Rapeseed/Mustard using sticker or during clear/dry days.</li> </ul>
Jhum field	Sowing		<ul style="list-style-type: none"> <li>• Adopt sowing of leguminous crops like cowpea, frenchbean, soybean etc at 2-3 rows across the slope of jhum field at desirable intervals or ratios with rice to prevent soil erosion and conserve moisture and fertility.</li> <li>• Carry out seed dressing/treatment with Thiram or Carbendazim @ 2g/kg seed before sowing.</li> <li>• Cowpea variety (Kashi Kanchan) and Frenchbean variety (Selection-9) are advocated for intercropping as they are short duration, dwarf and high yielding.</li> </ul>
<b>VEGETABLES</b>			
Cucurbits	Vegetative		<ul style="list-style-type: none"> <li>❖ <b>Cover the base of crop with locally available mulches to avoid exposure to erosion,.</b></li> <li>❖ <b>Avoid water stagnation near the base of the plant through proper drainage</b></li> </ul>
Ginger/ Turmeric	Sowing/ germination		<ul style="list-style-type: none"> <li>❖ <b>Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil &amp; conserve moisture during dry seasons.</b></li> </ul>
<b>HORTICULTURAL CROPS</b>			
Apple	Fruiting	Fruit drop	<ul style="list-style-type: none"> <li>❖ <b>Spray 2,4,5-T @ 20ppm or 2,4,5-TCPA @ 15ppm to inhibit fruit drop</b></li> </ul>
Citrus	Flowering	Fruit drop/ Phytophthora	<ul style="list-style-type: none"> <li>• <b>Foliar application of micronutrient/multiplex @ 0.2% should be done to prevent flower drop</b></li> <li>• During clear dry days, apply Bordeaux paste on the tree trunk upto the height of 24 inches by brush.</li> <li>• During clear dry days or using stickers during rain, spraying and drenching with metalaxyl MZ-72 @ 2.75 g/lit water on the tree against Phytophthora.</li> <li>• Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.</li> </ul>
Peach	Fruit maturing	Fruit Fly	<ul style="list-style-type: none"> <li>❖ <b>Install fruit fly pheromone traps,</b></li> <li>❖ <b>Collect and dispose off the fallen fruits.</b></li> <li>❖ <b>Clean basin,</b></li> </ul>
Large cardamom	Sowing		<ul style="list-style-type: none"> <li>❖ Sowing in primary nursery bed at 2cm depth &amp; 10cm apart with mulching &amp; regular irrigation.</li> </ul>
Kiwi	Flowering		<ul style="list-style-type: none"> <li>❖ <b>Kiwi fruit vine should be covered with 50% shade net to protect flowers from heavy rain and hail storm.</b></li> </ul>
Banana	Bunching	Cold	<ul style="list-style-type: none"> <li>❖ Cover newly emerged bunches with locally available sack to protect from cold/frost</li> <li>❖ <b>Mulching with straw/crop residue at root zone to avoid frost injury in banana.</b></li> </ul>
<b>LIVESTOCKS</b>			
<b>Livestock</b>	<b>Stage</b>	<b>Disease</b>	❖ <b>Precautionary Practices to be followed</b>
❖ <b>General</b>			
<ul style="list-style-type: none"> <li>❖ Damaged grain (not fungus contaminated) to be diverted for Poultry/livestock feeding</li> <li>❖ Clean drinking water should be ensured round the clock and water troughs/feeders should be regularly</li> </ul>			

cleaned,			
Fishery			<ul style="list-style-type: none"> <li>❖ <b>To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.</b></li> <li>❖ <b>Broadcast mustard Oil Cake (MOC) @5kg/day over the pond twice daily to feed fish fingerlings.</b></li> </ul>
Pigs	All stages	FMD (high fever and appearance of mucous membrane of the mouth and foot.) Swine Fever	<ul style="list-style-type: none"> <li>❖ <b>Food waste or garbage fed to swine must be cooked and sterilized properly. Crop	Stage	Pest/Disease	Precautionary Practices to be followed
FIELD CROPS			
Jhum rice	Rooting/ Leaf elongation		<ul style="list-style-type: none"><li>❖ Provide proper drainage and soil conservation measures like mulching with locally available materials.</li><li>❖ Keep the periphery clean</li><li>❖ Avoid application of fertilizer and insecticides/pesticides</li></ul>

Rice	Leaf Elongation/ Tillering	Stem borer	❖ <b>Rice: Weed free &amp; clean nursery periphery to prevent disease/pest harboring.</b> ❖ Rice: Spray Triazophos 40EC @ 4 ml/lit against stem borer in rice nursery as well as in main field.
Pea	Maturity	Powdery mildew/ leaf eating insects	❖ <b>Green pods can be harvested during sunny days</b> ❖ Provide adequate drainage and avoid water stagnation near the base of the plants. ❖ Need based foliar spray of Dinocap (0.2%) or Carbendazim 50WP (0.1%) or Propiconazole (0.1%) using sticker if the infestation is high.
Maize	Pod formation	Soybean looper	❖ <b>Provide proper drainage</b> ❖ <b>Spray Azadirachtin 0.15% EC 2@ 6ml/lit</b> ❖ <b>Monitor the crop against attack of insect pests,</b>
Toria/ Mustard	Harvesting	Aphids	❖ <b>Harvest during clear/dry days</b> ❖ Provide adequate drainage ❖ If the infestation is high, Spray Dimethoate 30EC @2ml/litre against aphids in Rapeseed/Mustard using sticker or during clear/dry days.
<b>VEGETABLES</b>			
Cucurbits	Vegetative		❖ <b>Cover the base of crop with locally available mulches to avoid exposure to erosion,,</b> ❖ <b>Avoid water stagnation near the base of the plant through proper drainage</b>
Ginger/ Turmeric	Sowing/ germination		❖ <b>Mulching ginger beds with locally available leaves/materials is advocated to enhance germination, prevent washing off during heavy rainfall, add organic matter to the soil &amp; conserve moisture during dry seasons.</b>
French Bean	Vegetative		❖ <b>Avoid water stagnation in field by making proper drainage.</b>
<b>HORTICULTURAL CROPS</b>			
Apple	Fruiting	Fruit drop	❖ <b>Spray 2,4,5-T @ 20ppm or 2,4,5-TCPA @ 15ppm to inhibit fruit drop</b>
Citrus	Flowering	Fruit drop/ Phytophthora	<ul style="list-style-type: none"> <li>❖ <b>Foliar application of micronutrient/multiplex @ 0.2% should be done to prevent flower drop</b></li> <li>• During clear dry days, apply Bordeaux paste on the tree trunk upto the height of 24 inches by brush.</li> <li>• During clear dry days or using stickers during rain, spraying and drenching with metalaxyl MZ-72 @ 2.75 g/lit water on the tree against Phytophthora.</li> <li>• Prepare half moon terraces for fruit crops (orange/banana/apple/peach) in steep slopes to prevent nutrient loss due to rain.</li> </ul>
Peach	Fruit maturing	Fruit Fly	❖ <b>Install fruit fly pheromone traps,</b> ❖ <b>Collect and dispose off the fallen fruits.</b> ❖ <b>Clean basin,</b>
Guava	Flowering		❖ <b>Avoid water logging in the basin,</b> ❖ <b>Basin cleaning in half moon system is advised,</b>
Banana	Bunching		❖ Denavelling (removal of male bud) & bagging of bunches advocated..
Kiwi	Flowering		❖ <b>Kiwi fruit vine should be covered with 50% shade net to protect flowers from heavy rain and hail storm.</b>
Large cardamom	Sowing		❖ Sowing in primary nursery bed at 2cm depth & 10cm apart with mulching & regular irrigation. ❖ <b>Applications of well decomposed cattle manure/compost @5kg/plant during clear/dry days.</b>
<b>HONEY BEES</b>			
Honey bees			❖ Cover the boxes with locally available dry grass or straw to provide warmth
<b>LIVESTOCKS</b>			
<b>Livestock</b>	<b>Stage</b>	<b>Disease</b>	❖ <b>Precautionary Practices to be followed</b>
Pigs	All stages	FMD (high fever and appearance of mucous	❖ <b>Food waste or garbage fed to swine must be cooked and sterilized properly. Cooking the different raw materials</b>

		membrane of the mouth and foot.) Swine Fever	<p><b>together is advocated to improve digestibility and to break- down toxins from some feeds.</b></p> <ul style="list-style-type: none"> <li>❖ Avoid dampness and cover weak and sick animals with sack cloth.</li> <li>❖ The bedding is always dry and that there is plenty.</li> <li>❖ Animals should be given lukewarm feed and water.</li> <li>❖ Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</li> </ul>
Fishery			<ul style="list-style-type: none"> <li>❖ <b>To avoid water turbidity, use grass turfing or horticultural crop at embankment/dyke of the earthen fish pond.</b></li> </ul>
Poultry	All stages		<ul style="list-style-type: none"> <li>❖ <b>Provide shelter to the backyard/scavenging poultry. Feed grains in the morning/evening to supplement scavenging.</b></li> <li>❖ Day old chick-Maintain warmth by lighting,</li> <li>❖ <b>Inclusion of turmeric powder @ 10g/kg feed for prevention of coccidiosis.</b></li> </ul>
Cattle	All stages	FMD	<ul style="list-style-type: none"> <li>❖ <b>Animals should be given lukewarm feed and water.</b></li> <li>❖ <b>Right time to deworm with anti helmetic drugs (particularly Tapeworms) viz. Fento Plus @ 1 tablet per 30 kg body weight.</b></li> <li>❖ Provide feed supplements</li> </ul>
Mithun		FMD	<ul style="list-style-type: none"> <li>❖ Polyvalent FMD vaccine with serotype O, A and Asia at 6 months of age and repeat after that 6 months interval by sub-cutaneous route.</li> <li>❖ Pregnant animals above 7 months of pregnancy should be avoided.</li> </ul>
