MANIPUR BULLETIN 8th August, 2014

Churachandpur

Significant past weather for the preceding bi-weekly of	Weather forecast for next five days of Churachandpur
Imphal - West (5 th to 7 th August, 2014)	(9 th to 13 th August, 2014)
During past three days sky was partly cloudy to mainly	There may be light to moderate rains upto Wednesday.
cloudy. 15.3 mm rainfall was recorded during past three days.	Sky may be partly cloudy to cloudy with maximum temp.
Maximum temperature range observed was 32.5 – 32.7 °C,	of 31.0 – 33.0 °C & minimum temp. 22.0 – 23.0 °C.
range of minimum temperature observed was 21.9 – 24.0 °C,	Relative humidity may reach a maximum of 100 %
mean relative humidity observed in morning and afternoon	(maximum RH) & 88 % (minimum RH). The average
were 87.7 % and 63.3 % respectively. The average wind speed	wind speed may be 4 km/hr during next five days.
range was 0.6 – 3.9 km/hr.	

Name of the crop	Stage	Pest and disease infestation	Agro-meteorological advisories
Field Crops	1		
Rice	Tillering of Main Kharif		 One hand weeding may be done at 20-30 days after transplanting. Drain out the water and apply 33kg of urea as top dress after 30days of transplanting. Drain in water after 48hrs of top-dressing. Apply 16-24 kg of Carbofuran (3G)/ ha with first top dressing of fertilizer. After top dressing, one/ two prophylactic spray(s) in sunny days with 300-400ml Phosphamidon (40% EC), 300g Carbendazim and 20g Streptocycline diluted in 400-500 litres of water. Maintain water level of 5-8cm. Ridges should be well constructed to avoid draining out of water.
		Thrips & Leaf folder	- Spray Lambdacyhothrin @ 15 ml/ pump.
Maize	<i>Kharif Maize:</i> Cob maturity to harvesting		Mature cobs may be harvested.Cobs should be sundried properly before storage.
Soybean / Groundnut	Vegetative	Hairy caterpillars Tikka disease	 Hand weeding should be done. Avoid leaf eating caterpillars/ insects upto 60 days after sowing. For control of red hairy caterpillars, dust 5% Malathion @ 20 kg/ ha to control it or spray Dichlorovos 7.6 EC 0.05% (0.6ml/ lit of water). Spray Carbendazim @ 0.5g / lit of water to control Tikka disease in groundnut.
Storage			- Clean and store the seeds in RC-seed bins after proper drying. Check for germination of seeds or fungal growth. After proper drying, store grains/ seeds in well ventilated godowns.
Horticulture Crops			
Tree bean & Papaya	Planting		- Transplant raised nursery in the foot-hills or upland area.
Chilli	Fruiting to harvesting	- Anthracnose	- Harvest mature fruits and spray Mancozeb @ 2 g/ lit of water at $7 - 10$ days interval against Anthracnose.
Early Cauliflower	Nursery		 Land preparation of main field for transplanting may be started. Prepare temporary rain shelter to protect cauliflower nursery. Proper drainage may be well constructed. Recommended varieties are: White Shot, Whilt Flash, and Swetha.
Citrus	Nursery		- Spray Imidachloprid@2ml/lit of water or Dichlorovos@0.5ml/litwater.
King Chilli	Fruiting	Fruit rot and aphid	- Spray Redomil Gold @ 2g/lit water + Imidacloprid @ 3ml/10lit of water.

"Integrated Agromet Advisory Services"

Ginger		Rhizome initiation		Shoot borer/ soft rot	 Spray Dichlorovos @0.5ml/litwaterand Sixer (Carbendazim + Mencozeb) @ 2g/lit water as curative as well as prophylactic measure. Drain out excess water from the field. 	
Turmeric	Turmeric Rhizome initiation			Taphrine leaf blotch and other leaf spot	- Spray Redomil MZ 72 WP @ 2g/lit water at least two times alternately with Sixer at 15 days interval.	
Animal Sc	iences				J

MANIPUR BULLETIN 8th August, 2014

Tamenglong

Significant past weather for the preceding bi-weekly of Imphal - West (5 th to 7 th August, 2014)	Weather forecast for next five days of Tamenglong (9 th to 13 th August, 2014)
During past three days sky was partly cloudy to mainly cloudy. 15.3 mm rainfall was recorded during past three days. Maximum temperature range observed was 32.5 – 32.7 °C, range of minimum temperature observed was 21.9 – 24.0 °C, mean relative humidity observed in morning and afternoon	
were 87.7% and 63.3% respectively. The average wind speed range was $0.6 - 3.9$ km/hr.	wind speed may be 3-4 km/hr during next five days.

Name of the crop	Stage	Pest and disease infestation	Agro-meteorological advisories
Field Crops	3		·
Rice	Tillering of Main Kharif		 One hand weeding may be done at 20-30 days after transplanting. Drain out the water and apply 33kg of urea as top dress after 30days of transplanting. Drain in water after 48hrs of top-dressing. Apply 16-24 kg of Carbofuran (3G)/ ha with first top dressing of fertilizer. After top dressing, one/ two prophylactic spray(s) in sunny days with 300-400ml Phosphamidon (40% EC), 300g Carbendazim and 20g Streptocycline diluted in 400-500 litres of water. Maintain water level of 5-8cm. Ridges should be well constructed to avoid draining out of water.
		Thrips & Leaf folder	- Spray Lambdacyhothrin @ 15 ml/ pump.
Maize	<i>Kharif Maize:</i> Cob maturity to harvesting		Mature cobs may be harvested.Cobs should be sundried properly before storage.
Soybean / Groundnut	Vegetative	Hairy caterpillars Tikka disease	 Hand weeding should be done. Avoid leaf eating caterpillars/ insects upto 60 days after sowing. For control of red hairy caterpillars, dust 5% Malathion @ 20 kg/ ha to control it or spray Dichlorovos 7.6 EC 0.05% (0.6ml/ lit of water). Spray Carbendazim @ 0.5g / lit of water to control Tikka disease in groundnut.
Storage			- Clean and store the seeds in RC-seed bins after proper drying. Check for germination of seeds or fungal growth. After proper drying, store grains/ seeds in well ventilated godowns.
Horticulture Crops			
Tree bean & Papaya	Planting		- Transplant raised nursery in the foot-hills or upland area.
Chilli	Fruiting to harvesting	- Anthracnose	- Harvest mature fruits and spray Mancozeb @ 2 g/ lit of water at $7-10$ days interval against Anthracnose.
Early Cauliflower	Nursery		 Land preparation of main field for transplanting may be started. Prepare temporary rain shelter to protect cauliflower nursery. Proper drainage may be well constructed. Recommended varieties are: White Shot, Whilt Flash, and Swetha.
Citrus	Nursery		- Spray Imidachloprid@2ml/lit of water or Dichlorovos@0.5ml/litwater.
King Chilli	Fruiting	Fruit rot and aphid	- Spray Redomil Gold @ 2g/lit water + Imidacloprid @ 3ml/10lit of water.

"Integrated Agromet Advisory Services"

Ginger		Rhizome initiation	Shoot borer/ soft rot	 Spray Dichlorovos @0.5ml/litwaterand Sixer (Carbendazim + Mencozeb) @ 2g/lit water as curative as well as prophylactic measure. Drain out excess water from the field.
I ul morite		Rhizome initiation	Taphrine leaf blotch and other leaf spot	- Spray Redomil MZ 72 WP @ 2g/lit water at least two times alternately with Sixer at 15 days interval.

Imphal - West (5 th to 7 th August, 2014)	$(9^{\text{th}} \text{ to } 13^{\text{th}} \text{ August, } 2014)$	
During past three days sky was partly cloudy to mainly	There may be light to moderate rains upto Wednesday.	
cloudy. 15.3 mm rainfall was recorded during past three days.	Sky may be partly cloudy to cloudy with maximum temp.	
Maximum temperature range observed was 32.5 - 32.7 °C,	of 32.0 – 34.0 °C & minimum temp. 23.0 – 24.0 °C.	
range of minimum temperature observed was 21.9 - 24.0 °C,	Relative humidity may reach a maximum of 99 %	
mean relative humidity observed in morning and afternoon	(maximum RH) & 81 % (minimum RH). The average	
were 87.7 % and 63.3 % respectively. The average wind speed	wind speed may be 5 km/hr during next five days.	
range was 0.6 – 3.9 km/hr.		

Name of the crop	Stage	Pest and disease infestation	Agro-meteorological advisories
Field Crops]		
Rice	Tillering of Main Kharif		 One hand weeding may be done at 20-30 days after transplanting. Drain out the water and apply 33kg of urea as top dress after 30days of transplanting. Drain in water after 48hrs of top-dressing. Apply 16-24 kg of Carbofuran (3G)/ ha with first top dressing of fertilizer. After top dressing, one/ two prophylactic spray(s) in sunny days with 300-400ml Phosphamidon (40% EC), 300g Carbendazim and 20g Streptocycline diluted in 400-500 litres of water. Maintain water level of 5-8cm. Ridges should be well constructed to avoid draining out of water.
		Thrips & Leaf folder	- Spray Lambdacyhothrin @ 15 ml/ pump.
Maize	<i>Kharif Maize:</i> Cob maturity to harvesting		Mature cobs may be harvested.Cobs should be sundried properly before storage.
Soybean / Groundnut	Vegetative	Hairy caterpillars Tikka disease	 Hand weeding should be done. Avoid leaf eating caterpillars/ insects upto 60 days after sowing. For control of red hairy caterpillars, dust 5% Malathion @ 20 kg/ ha to control it or spray Dichlorovos 7.6 EC 0.05% (0.6ml/ lit of water). Spray Carbendazim @ 0.5g / lit of water to control Tikka disease in groundnut.
Storage			- Clean and store the seeds in RC-seed bins after proper drying. Check for germination of seeds or fungal growth. After proper drying, store grains/ seeds in well ventilated godowns.
Horticulture Crops	J	- I	
Tree bean & Papaya	Planting		- Transplant raised nursery in the foot-hills or upland area.
Chilli	Fruiting to harvesting	- Anthracnose	- Harvest mature fruits and spray Mancozeb @ 2 g/ lit of water at $7 - 10$ days interval against Anthracnose.
Early Cauliflower	Nursery		 Land preparation of main field for transplanting may be started. Prepare temporary rain shelter to protect cauliflower nursery. Proper drainage may be well constructed. Recommended varieties are: White Shot, Whilt Flash, and Swetha.
Citrus	Nursery		- Spray Imidachloprid@2ml/lit of water or Dichlorovos@0.5ml/litwater.
King Chilli	Fruiting	Fruit rot and aphid	- Spray Redomil Gold @ 2g/lit water + Imidacloprid @ 3ml/10lit of water.

"Integrated Agromet Advisory Services"

Ginger		Rhizome initiation	Shoot borer/ soft rot	- Spray Dichlorovos @0.5ml/litwaterand Sixer (Carbendazim + Mencozeb) @ 2g/lit water as curative as well as prophylactic measure.
				- Drain out excess water from the field.
I di interite		Rhizome initiation	Taphrine leaf blotch and other leaf spot	- Spray Redomil MZ 72 WP @ 2g/lit water at least two times alternately with Sixer at 15 days interval.
Animal Sc	iences			<u>]</u>
Name of the a		Growth stage	Disease/ infestation	Agro-meteorological advisories
Poultry		All susceptible age	Ranikhet disease	Vaccinate against Ranikhet disease.
		groups (as and when required)	ⁿ Fowl pox	- Vaccinate against fowl pox. If already infected, paint with Iodine tincture or Betadine liquid daily on pox growth.
			Management	Add Furazolidone @ 100g in 100 kg of feed for one week. Keep litter material dry and add lime powder (deactivated) @ 3-4 kg per 100sq. ft.
			Parasites (external)	Spray Butox liquid @ 2 ml/ lit of water twice a week.
Sheep/ Goat Above 3 months of age (as and when required)		Enterotoxaemia	Enterotoxaemia vaccination if available (M.C.C.V.) at 5 cc sub- cutaeneously.	
Pig Above 3 months of age (as and when required)		Above 3 months of age (as and when	Deworming	- Deworming against Helminth parasites using Piperazine citrate @ 30 ml per adult animal once.
		required)	Ticks	Add Butox liquid @ 2 ml/ lit of water and use the solution twice a week while brushing the animal.
			Give mineral mixture like Vimicon and Ascagold suspension in pregnant sow @ 20g and 20ml resp. in feed.	
Cattle / Buffalo/ Mithun		Above 3 months of age (as and when	Black Quarter	- B.Q. vaccination may be carried out to control occurrence of Black Quarter disease during cold season (Nov. & Dec.)
		required)	Tick	Add Butox @ 2cc/ lit of water and bath animal using the solution at fortnight interval.
			Amphistomiasis	- Tolzan-F @ 30 ml/ 100kg body weight.
Fishery:				
Type of Farming	Stage	Stage Management Agro-metrological advisories		es
Carp	Breed	ling Pond and	- Clean and clear water having 7.0-7.8 pH free from unwanted vegetation and insects. Water	
culture nu		water	depth should be maintained at 1.0-1.5m.	
		Fish		f carp brooders (2-4 years old) having more than 1kg b. wt. for Rohu,
		Hormone dose	Mrigal, Catla, Kuri for seed production. For Pengba & Khabak b. wt. May be less than 300g. - Ovitide/ Wova-FH/ Ovaprim@ 0.5ml/kg body weight can be injected to induce for spawning.	
	nurse	ries	- Ponds should be free from unwanted vegetation and insects and water depth should be maintained at 1.0-1.5m. p ^H of pond water should be maintained at 7.0-7.5. Feeds should be provided 2-3 times a day @ 5-10 body weight per day. 20-30 million spawn can be stock in 1 ha.	
	Grow	- Pond and	- Regular manuring at interval of 30 days with a slurry of RCD @1500kg/ha. Maintained p^{H} of	
	out	water	pond water at 7.0-7.5.	Greenish colouration of water is desirable. If any change in colour, odour
				ter should be drain out and replace with fresh water.
		Fish		gs/ha can be stocked. Sampling of fish should be done by regular netting.
		Feed		ortified with vitamins and minerals should be provided @ 3-5% body
