Weather summary of the past three days

Weather forecast valid from 27th June, 2015 To 01st July, 2015.

There are chances of moderate to light rainfall during the next 4 days. The maximum and minimum temperatures for the next 5 days may range for 26-31°C and 20-21°C. Maximum relative humidity is expected in the range of 96-99% and minimum may from 56-86%. Wind direction would be southeasterly with the wind speed of 3-4 km per hour. Partially cloudy sky will prevail during the next five days.

Weekly cumulative rainfall: 32.0 mm

Weather summary of the past three days

Weather forecast valid from 27th June, 2015 To 01st July, 2015.

There are chances of moderate to light and heavy rainfall during the next 4 day. The maximum and minimum temperatures for the next 5 days may range for 26-30°C and 19-20°C. Maximum relative humidity is expected in the range of 98-99% and minimum may from 57-85%. Wind direction would be easterly to north westerly with the wind speed of 3-5 km per hour. Partially cloudy sky will prevail during the next five days.

Weekly cumulative rainfall: 38.0 mm

Weather summary of the past three days

Weather forecast valid from 27th June, 2015 To 01st July, 2015.

There are chances of moderate to light rainfall during the next 5 day. The maximum and minimum temperatures for the next 5 days may range for 25-30°C and 18-21°C. Maximum relative humidity is expected in the range of 99-100% and minimum may from 52-88%. Wind direction would be northeasterly to southeasterly with the wind speed of 2 km per hour. Partially cloudy sky will prevail during the next five days.

Weekly cumulative rainfall: 32.0 mm

Weather summary of the past three days

Weather forecast valid from 27th June, 2015 To 01st July, 2015.

There are chances of moderate to light rainfall during the next 5 day. The maximum and minimum temperatures for the next 5 days may range for 26-31°C and 19-22°C. Maximum relative humidity is expected in the range of 96-99% and minimum may from 51-84%. Wind direction would be Northeasterly to southeasterly with the wind speed of 2-3 km per hour. Partially cloudy sky will prevail during the next five days.

Weekly cumulative rainfall: 48.0 mm

Main Crop/ Animal /Fisheries	Stage	Cultural practices/ Pest/ Diseases	Agricultural / Horticultural/ animal husbandry advisories
Khasi Mandarin and acid lime	Transplant stage		 Well rotten FYM @ 500g/pit is applied at 15-20 days before planting along with 12 g each of N and K ₂ O/plant and 4 g of P ₂ O ₅ /plant.

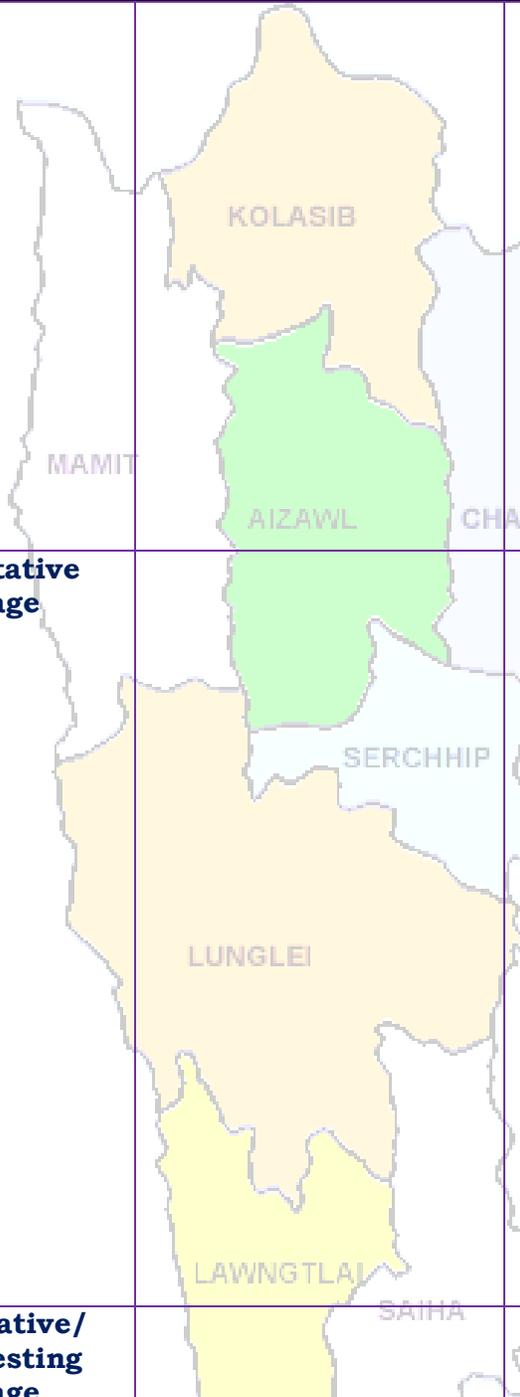

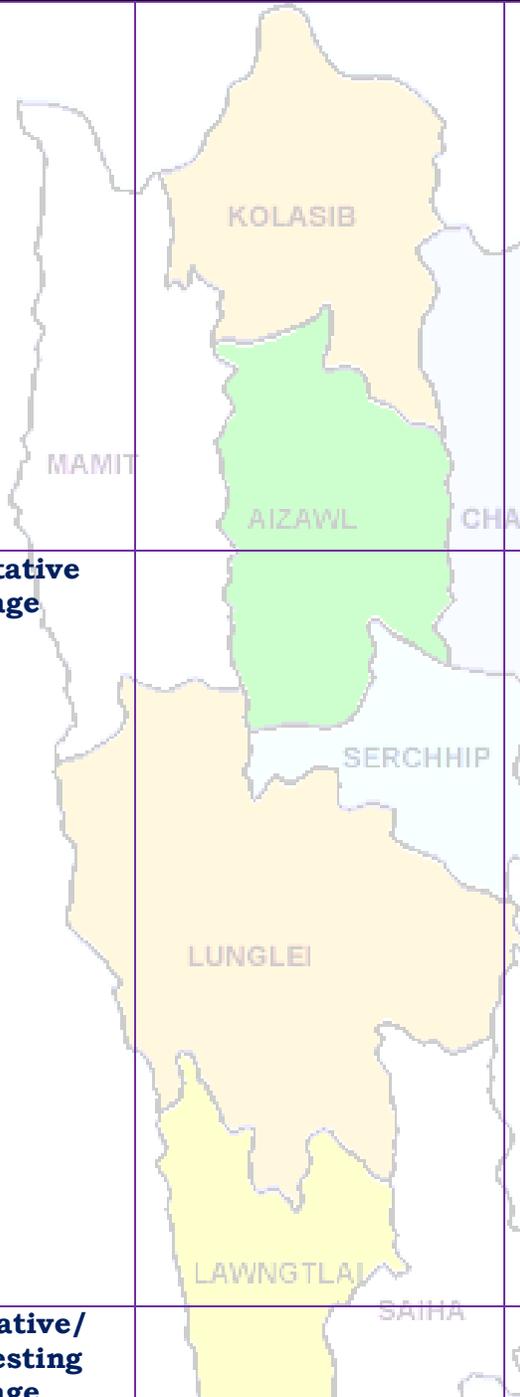

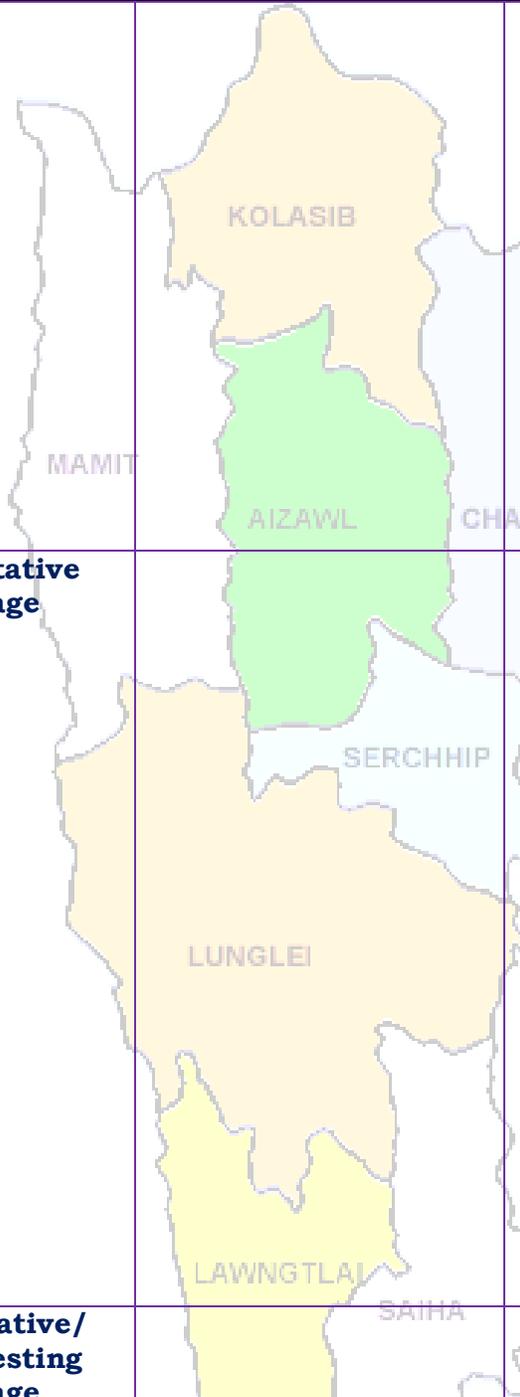

GRAMIN KRISHI MAUSAM SEWA ICAR RESEARCH COMPLEX FOR NEH REGION

Lawngtlai-321.51mm (285.5mm)	Lunglei-344.00mm (186.21mm)	Mamit-449.48mm (442.80mm)	Serchhip-411.72mm (25.9mm)

Weather summary of the past three days

The temperature range for maximum and minimum were 28.5-31.4°C and 20.1-24.3°C respectively. Partially cloudy sky was observed. Wind direction is southeasterly. Maximum RH observed 84-89% & minimum of 48-54%. Rainfall recorded for the past three days is **25.10mm.**

Weather forecast valid from 27th June, 2015 To 01st July, 2015.

There are chances of moderate to light rainfall during the next 5 day. The maximum and minimum temperatures for the next 5 days may range for 28-33°C and 21-23°C. Maximum relative humidity is expected in the range of 95-98% and minimum may from 53-83%. Wind direction would be southeasterly with the wind speed of 2-4 km per hour. Partially cloudy sky will prevail during the next five days.

Weekly cumulative rainfall: 40.0 mm

		<p>KOLASIB</p>	<p>Basalin @0.5 ml/lit of water for reduce grass type weed.</p> <ul style="list-style-type: none"> ✚ Mulching with black polythene film reduces weed growth, increases the crop growth. ✚ Split dose of fertilizer application @ 50kg/ha urea.
		<p>1. Aphid(<i>Aphis gossypii</i>)</p>	<ul style="list-style-type: none"> • Spray surf water solution to the plat. • Spray any one of the insecticides Imidacloprid 200 SL @ 0.25ml/lt of water (Sucking pest) or Dimethoate 30 % EC 7ml/10lt of water.
		<p>2. Epilachna beetle. (<i>Epilachna vigintioctopanctata</i>)</p>	<ul style="list-style-type: none"> • Spray with methyl parathion 0.5% or dimethoate 0.3% is effective against flea beetle.
Rice	Transplanting stage	<p>Kharif Rice</p>	<ul style="list-style-type: none"> ✚ Land preparation is done by ploughing, harrowing, and levelling the field to make it suitable for crop establishment. ✚ Ploughing should be done 3-4 weeks prior to sowing. ✚ After ploughing, harrowing the field should be done twice, with one week gap between the two. First harrowing should be done after 1 week of ploughing. The second harrowing should be done across the first harrowing. ✚ Under good management and adequate nitrogen levels, the optimum spacing for rice varieties should be around 20x15 cms both for kharif and rabi crops. ✚ Transplanting two to three seedlings per hill under normal conditions is enough. The use of more seedlings per hill, besides not being any additional advantage, involves an extra expense on
