Min RH (%)	44	43	43	42	42
Wind Speed (KmPH)	2	2	2	3	3
*Wind Direction	S-E	S-E	E	E	E

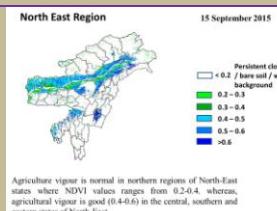

Northerly- N, North-Easterly- N-E, Easterly- E, South-Easterly- S-E,
Southerly- S, South-Westerly- S-W, Westerly-W, North-westerly- N-W.

STATUS OF MONSOON- September 1-30, 2015 (Percent of deviation from normal in parenthesis)

Aizawl- 387.0mm (481.6mm)	Champhai- 301.8mm (295.1mm)	Saiha- 367.7 mm (450.8mm)	Kolasib- 372.0mm (433.1mm)
Lawngtlai-365.4mm (320.7mm)	Lunglei-371.4mm (432.4mm)	Mamit-376.0mm (359.0mm)	Serchhip-301.86mm (265.4mm)

Weather summary of the past three days	Weather forecast valid from 21 st October, 2015 To 25 th October, 2015.
The temperature range for maximum and minimum were 28.0-30.5°C and 17.8-20.3°C respectively. Clear sky was observed. Wind direction is southeasterly. Maximum RH observed 84-93% & minimum of 62-72%. Rainfall recorded for the past three days is 00.00mm.	There is no chance of rainfall during the next 5 day. The maximum and minimum temperatures for the next 5 days may range for 30-31°C and 13-15°C. Maximum relative humidity is expected in the range of 99% and minimum may from 42-44%. Wind direction would be easterly to southeasterly with the wind speed of 2 km per hour. Clear sky will prevail during the next five days.

Weekly cumulative rainfall: 00.0 mm

NDVI for Mizoram		NDVI for Mizoram is less than normal NDVI. Value shown that NDVI is zero. So, it represents "Bare Soil".

Main Crop/ Animal /Fisheries	Stage	Cultural practices/ Pest/ Diseases	Agricultural / Horticultural/ animal husbandry advisories
Khasi Mandarin and acid lime	Transplant stage	Pruning and Training KOLASIB MAMIT AIZAWL CHAMPAHN SERCHHIP	<ul style="list-style-type: none"> After 6 months to 1 year from the date of planting, 4-5 well shaped branches spread on all the four sides are retained and others cut at their bases 20-25 cm above ground level in case of seedling trees, while 5-7 cm above bud union in case of budded plants. A smaller dose of these nutrients (250-300 g N, 200-250 g P₂O₅ and 250-300 g K₂O) is required for other citrus fruits also. Liming is also beneficial to citrus, especially in this region because of its acidic soil. Lime can also be sprayed along with other nutrients but in the long run basal application is more beneficial at the rate of 500-800 g per plant.
Oil palm	Flowering stage/Fruit formation stage	 LUNGLEI LAWNGTIA SAIHA	<ul style="list-style-type: none"> Application of split dose of fertilizer 600: 200:100 (g/pt) in flowering plant. Apply micro-nutrients viz. zinc, copper, manganese, iron, boron and molybdenum are required in ample quantities for supplying nutrients and also reduce serious disorders which may lead to decline of the whole orchard for fruit bearing plant. Retain sufficient fronds and remove surplus fronds to provide optimal leaf area index (LAI). Cleaning near base of the plant

Animal / Fisheries		practices/ Pest/ Diseases	husbandry advisories
Khasi Mandarin and acid lime	Transplant stage	Pruning and Training 	<ul style="list-style-type: none"> After 6 months to 1 year from the date of planting, 4-5 well shaped branches spread on all the four sides are retained and others cut at their bases 20-25 cm above ground level in case of seedling trees, while 5-7 cm above bud union in case of budded plants. A smaller dose of these nutrients (250-300 g N, 200-250 g P₂O₅ and 250-300 g K₂O) is required for other citrus fruits also. Liming is also beneficial to citrus, especially in this region because of its acidic soil. Lime can also be sprayed along with other nutrients but in the long run basal application is more beneficial at the rate of 500-800 g per plant.
Oil palm	Flowering stage/Fruit formation stage		<ul style="list-style-type: none"> Application of split dose of fertilizer 600: 200:100 (g/pt) in flowering plant. Apply micro-nutrients viz. zinc, copper, manganese, iron, boron and molybdenum are required in ample quantities for supplying nutrients and also reduce serious disorders which may lead to decline of the whole orchard for fruit bearing plant. Retain sufficient fronds and remove surplus fronds to provide optimal leaf area index (LAI).
Banana	Flowering/ harvesting		<ul style="list-style-type: none"> Cleaning near base of the plant and cut unwanted branches.
