Main Crop/ Animal /Fisheries	Stage	Cultural practices/ Pest/ Diseases	Agricultural / Horticultural/ animal husbandry advisories
FRUITS CROPS			
KHASI MANDARIN AND ACID LIME	Seedling to Harvesting stage	KOLASIB MAMIT AIZAWL	<ul style="list-style-type: none"> Mulching should be done with dry grasses near the tree base to conserve soil moisture during winter. The young fruit plant must be irrigated at weekly interval for better establishment. The land should be ploughed time to time to minimise the weeds and to improve the soil physical condition. Irrigation of plants at alternate day's interval, 6 weeks before harvesting improves fruit retention and fruit development, and reduces fruit cracking and improves the fruit quality.
BANANA		Gummosis, citrus canker, citrus greening and Dieback	<ul style="list-style-type: none"> Due to low temperature and humidity disease appearance will more. Use Bordeaux past in tree trunk, twigs and branches protect healthy plant from soil borne disease.
STAR FRUIT			
PLUM AND PEACH		Fruit fly	<ul style="list-style-type: none"> In large gardens apply carbaryl 0.2 per cent or malathion 0.15 per cent suspension containing sugar or jaggery at 10 g/l at fortnightly intervals at flowering and fruit initiation.
PLANTATION CROP			
COFFEE	All stages	LAWNGTIA SAIHA	<p>Nursery stage</p> <ul style="list-style-type: none"> Pre-sowing seed treatment with <i>Azospirillum</i> and <i>Phosphobacterium</i> can be done Seeds are sown in December - January in the bed 1.5 - 2.5 cm apart with the flat side down wards in regular rows. Then they are covered with a thin layer of fine soil and a layer of paddy straw. Water the beds daily and protect from direct sunlight by an over head pandal. Seeds germinate in about 45 days after which they are transplanted to a

Main Crop/ Animal /Fisheries	Stage	Cultural practices/ Pest/ Diseases	Agricultural / Horticultural/ animal husbandry advisories
FRUITS CROPS			
KHASI MANDARIN AND ACID LIME	Seedling to Harvesting stage	KOLASIB MAMIT AIZAWL	<ul style="list-style-type: none"> Mulching should be done with dry grasses near the tree base to conserve soil moisture during winter. The young fruit plant must be irrigated at weekly interval for better establishment. The land should be ploughed time to time to minimise the weeds and to improve the soil physical condition. Irrigation of plants at alternate day's interval, 6 weeks before harvesting improves fruit retention and fruit development, and reduces fruit cracking and improves the fruit quality.
BANANA		Gummosis, citrus canker, citrus greening and Dieback	<ul style="list-style-type: none"> Due to low temperature and humidity disease appearance will more. Use Bordeaux past in tree trunk, twigs and branches protect healthy plant from soil borne disease.
STAR FRUIT			
PLUM AND PEACH		Fruit fly	<ul style="list-style-type: none"> In large gardens apply carbaryl 0.2 per cent or malathion 0.15 per cent suspension containing sugar or jaggery at 10 g/l at fortnightly intervals at flowering and fruit initiation.
PLANTATION CROP			
COFFEE	All stages	LAWNGTIA SAIHA	<p>Nursery stage</p> <ul style="list-style-type: none"> Pre-sowing seed treatment with <i>Azospirillum</i> and <i>Phosphobacterium</i> can be done Seeds are sown in December - January in the bed 1.5 - 2.5 cm apart with the flat side down wards in regular rows. Then they are covered with a thin layer of fine soil and a layer of paddy straw. Water the beds daily and protect from direct sunlight by an over head pandal. Seeds germinate in about 45 days after which they are transplanted to a
