

STATE COMPOSITE AGRO-MET ADVISORY BULLETIN FOR THE STATE OF SIKKIM PERIOD: 19TH AUGUST TO 22ND AUGUST'2016

IMD, GANGTOK IN COLLABORATION WITH *ICAR, GANGTOK, FSAD AND HCCD, GANGTOK*

ISSUED ON FRIDAY 19TH AUGUST'2016

Meteorological Sub-division of Sikkim

As per India Meteorological Department's classification, Sikkim is a part of Met Sub-Division of Sub Himalayan West Bengal & Sikkim (SHWB & SKM) and is divided into four (4) Districts:

- 1) North District with HQ at Mangan
- 2) East District with HQ at Gangtok
- 3) West District with HQ at Gyalsing
- 4) South District with HQ at Namchi

	Mangan (PTO)			North Sikkim Forecast

<u>Part II</u>

AGRO-METEREOLOGICAL ADVISORIES

- Spraying of plant protection biopesticides on bright sunny day for insect and disease management is recommended.
- **Water harvesting structure should be constructed for storing rain water.**
- Provide adequate drainage to avoid water logging in ginger, turmeric and summer vegetables.
- Vermicompost pits should be covered with gunny bags / weed biomass/ dry forest litter/ domestic and farm waste and kept moist by providing water at weekly interval.
- Avoid feeding of damp and foul smelling feed to all livestock and poultry.
- FMD Vaccination is strongly recommended for all livestock. Farmers may please contact nearest veterinary hospital/institution/V.O. for the vaccination
- De-worming with Fenbendazole @ 10 mg / kg body weight.
- Keep the Vanaraja chicks in warm condition (32-33°C at chick height) during the first four weeks. The floor should be covered with paddy husk (15 cm). Newspaper should be spread over the paddy husk during first 3-4 days. Starter feed should be spread over the newspaper.
- Regular raking of the floor litter should be done at an interval of 10 days. Lime powder application is recommended to prevent dampness. Excessive moist floor litter materials should be removed and replaced with fresh materials.
- Regular vaccination of Vanaraja birds: Lasota vaccine; 5-7 day old chicks in one eye. IBD vaccine; orally or in drinking water on 16 and 26 day old chicks. Lasota vaccine: 30 day old chicks in one eye.
- Sufficient green fodder should be provided to all livestock or allow range grazing to maintain proper productive and reproductive performance.

Name of the crop/Animal	Stage	Pest/ Disease	Agro-Met Advisories
Crops			
Rice	Transplanting/	-	Transplant two seedling of three
	vegetative stage		weeks age at spacing of 20×10 cm.
			\clubsuit Hand weeding should be done 20
			days after planting
Black gram	Land		After harvesting of maize plough the
	preparation/		land and apply well decomposed
	sowing		FYM @ 2.0 ton/ ha + vermicompost
			0.5 ton/ha + neem cake 100 kg/ha
			Sow the seeds at spacing of 30-45 cm
			× 15 cm.
			\diamond Seed treatment with <i>Trichoderma</i> sp.
			@ 5-10 g/kg seed and soil treatment
			@ 2.5 kg mixed with 50 kg FYM is

	F		1	
				recommended.
Soybean	Land		٨	After harvesting of maize plough the
	preparation/			land and apply well decomposed
	sowing			FYM @ 2.0 ton/ ha, vermicompost
				0.5 ton/ha and neem cake 100 kg/ha
			۲	Sow the seeds at spacing of 45 cm \times
				15 cm.
			٨	Seed treatment with Trichoderma sp.
				@ 5-10 g/kg seed and soil treatment
				@ 2.5 kg mixed with 50 kg FYM is
				recommended.
Tomato	Flowering/	Fruit borer/ white fly/	٨	Infected/dried leaves should be
	fruiting/	late blight		pruned and spray COC @ 0.25% at 7-
	harvesting			10 days interval for management of
				late blight.
			٨	Application of petroleum agrospray
				@ 10ml/litre or neem oil (1500 ppm)
				@ 5 ml/litre for management of
				aphids, white fly etc. at 15 days
				interval for 2-3 times.
			٨	Installation of sex pheromone traps @
				2-3 traps/1000 sqm.
Red cherry	Vegetative/	Aphid/ white fly	٨	Drenching with COC @ 0.25% at 7-
pepper	flowering/			10 days interval for management of
	fruiting			root rot.
			٨	Application of petroleum agrospray
				@ 10ml/litre or neem oil (1500 ppm)
				@ 5 ml/litre for management of
				aphids, white fly etc. at 15 days
				interval for 2-3 times.
Okra	Flowering/	Blister beetle/ friut	۲	Proper drainage should be ensured.
Cuaurhitaaaaua	fruiting/	fly		Regular monitoring, collection and
Cucurbitaceous	harvesting			destruction of beetles.
crops				Install pheromone traps @ 16-20
				traps/ha for control of fruit fly. The
				lure has to be replaced at every 20
				days interval.
				Collect and destroy the infected
				fruits.
Large	Fruiting	Tea mosquito bug		Shade management with the proper
cardamom				lopping of trees.
Ginger	Vegetative	Soft rot	۲	Proper drainage should be ensured.
			۲	Hand weeding at 15 days interval.
			۲	Drenching with COC @ 0.25% at 7-
				10 days interval for management of
				soft rot.
				F

			۲	Disease infected plants should be
				removed immediately and destroyed.
Sikkim	Fruit growth	Trunk borer/ leaf	٨	Tree trunk should be painted with 1%
mandarin	Truit growth	miner	Ť	Bordeaux paste.
mandarm		Scab and Felt disease		Plant basin should be kept weed free.
		Seab and Pert disease		Proper drainage should be ensured.
				For leaf miner and aphids
			*	management, application of petroleum
				agrospray @ 10ml/litre or neem oil
				(1500 ppm) @ 5 ml/litre at 15 days
				interval for 2-3 times is recommended.
				Spray COC @ 0.25% after removing
			~	the infected branches
				Regular monitoring for detection of
			*	trunk borer infestation at the base of
				the trunk is advised. If wooden frass is
				observed, cleaning and insertion of
				cotton soaked in kerosene and
				plastered with clay and cowdung
				mixture.
Kiwifruit	Fruiting			Plant basin should be kept weed free.
Kiwiiiult	Truiting			Proper drainage should be ensured.

Farmers are advised to look for heat sign especially during early morning or late evening and ensure breeding of the dairy cattle 12 hr after observation of heat. Breeding of the sheep/goat should be done 24-30 hr after observation of heat. Feeding of concentrate feed along with jaggery, mineral mixture and salt.

~ 1			
Cattle			 Balanced feeding of dairy animals and allow calf suckling immediately after parturition. Colostrum (first three days milk) feeding to new born calf for first three days of life should be ensured. Full hand milking should be practiced. Frequent incomplete milking at interval of 4hrs should be practiced after parturition for minimum 1 week. Afterwards complete milking in a day is recommended.
Poultry		Coccidiosis, Ranikhet disease	 16 hrs of light (natural and electrical) should be provided to adult birds for optimum egg production. Frequent raking and liming of deep litter materials. Inclusion of turmeric powder @ 10g/kg feed for prevention of coccidiosis. Maintenance of brooder temperature for chicks with the help of electrical bulbs for initial one month. Ranikhet vaccination at 5th day and at 30th day of age. Calcium/shell grit and multi vitamin supplementation is strongly recommended to optimize egg production. Spraying of ectoparasiticides <i>viz.</i>, deltamethrin/cypermethrin @ 1% v/v in water.
Pig	All stages	Swine fever	 Keep floor dry to avoid skin diseases. Weaning is recommended at the age of 8 weeks for crossbreds and 10 weeks for indigenous pigs. Swine fever vaccine at the age of 8-10 week is recommended. Critical heat detection in early morning and late evening is recommended. Feed 5-10% green fodder of their diet.
